December 17, 2025

Ms. Wendy Swindell/Indian River County
c/o Ecological Associates, Inc.
3552 NE Candice Ave.
Jensen Beach, FL 34957

Subject: **Phase I Environmental Site Assessment**
Subject Site: **Jungle Trail Property**
Parcel ID Number: 31392600000010000008.0

Dear Ms. Swindell:

Aspen Environmental has prepared the enclosed Phase I Environmental Site Assessment (ESA) report for Indian River County (herein referred to as the "Client") for the property located on Island Club Manor in Vero Beach, Florida ("Site"). Enclosed is an electronic copy of the report.

Should you have questions regarding this submittal or need additional information, please do not hesitate to contact us. We appreciate the opportunity to be of service to you.

Sincerely,

Jodi Beck
President

EXECUTIVE SUMMARY

Aspen Environmental, LLC completed a Phase I Environmental Site Assessment (ESA) for the approximately 19.6-acre vacant parcel located at 1350 Island Club Manor in Vero Beach, Indian River County, Florida. The ESA was conducted for Indian River County in general conformance with ASTM E1527-21 and the EPA All Appropriate Inquiries rule.

The Site is vacant, cleared land with water-filled ditches/canals along the northwestern boundary of the Site. The Site is surrounded primarily by residential development and vacant wooded lots, with the Indian River located west of the property. A Site reconnaissance, conducted on December 5, 2025, identified no evidence of hazardous substance use, storage, or releases, and no staining, stressed vegetation, significant debris, tanks, drums, or other indicators of contamination. Some piping, which may be remnants of an old well or irrigation system, was observed protruding from the ground surface on the western portion of the Subject Site, along with a discarded propane tank.

Historical records show the property operated as a citrus grove from at least 1943 through the late 1990s and has remained vacant since being cleared in the mid-2000s. Review of federal, state, and local environmental databases revealed no listings for the Site and no nearby facilities with documented releases that are likely to impact the property. No Recognized Environmental Conditions (RECs), Controlled RECs (CRECs) or Historical RECs (HRECs) were identified in connection with the Site; however, one Suspected REC was noted due to the Site's historical agricultural use and the potential for residual fertilizer- or pesticide-related impacts in soil or groundwater; however, no data currently exists to confirm such impacts. A de minimis condition related to past citrus operations on neighboring properties was also noted.

Two data gaps were identified (a lack of pre-1943 historical aerial photographs and the inability to interview former operators); however, these are not considered significant, as sufficient historical information is available to establish past site use. Additionally, there is no indication that PFAS-containing materials were stored or applied at the Site.

1. INTRODUCTION

Aspen Environmental, LLC (Aspen) was retained by Ecological Associates, Inc. to perform a Phase I Environmental Site Assessment (ESA) on a single vacant parcel of land located at 1350 Island Club Manor in Vero Beach, Florida (the "Site" or "Subject Property") on behalf of Indian River County (herein referred to as the "Client"). The Subject Property location is depicted on **Figure 1** (Site Location Map), and a recent layout is provided in **Figure 2** (Site Layout Map).

1.1 Purpose

This Phase I ESA was conducted in general accordance with the scope and limitations of certain guidance contained within the ASTM International (ASTM) Practice E1527-21. This Phase I was completed in order to provide the Client with a Phase I ESA to identify, to the extent feasible, if one or more "Recognized Environmental Conditions[1]" (RECs) exist for the Site, as the "REC" terminology is defined by ASTM E1527-21.

1.2 Scope of Services

The Phase I ESA was completed in accordance with the Client's authorization of Aspen's November 26, 2025 proposal. For the purposes of the Phase I ESA report, the Client represents the "User", defined as "the party seeking to use ASTM Practice E 1527 to complete an *environmental site assessment* of the *property*….". The Phase I ESA scope of work included: (i) review of pertinent information/documents provided to Aspen; (ii) review of local, state and Federal environmental databases for the Site and in the vicinity of the Site pursuant to the ASTM E1527-21 Practice; (iii) evaluation of historical land usage through obtaining/reviewing historical aerial photographs, fire insurance map report, city directories, property tax files, and/or topographic maps; (iv) a Site visit to perform a visual reconnaissance of the interior and exterior

[1] 1 As defined by ASTM E1527-21, a REC is: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;(2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions." ASTM E1527-21 also defines a "Historical REC" and a "Controlled REC."

site features and use of adjoining properties; (v) interviews with one or more individuals familiar with the Site; and (vi) preparation of a Phase I ESA report. In accordance with Aspen's scope of work for this Phase I ESA, no "non-scope considerations[2]" were evaluated as part of this Phase I ESA. As just one example of a non-scope consideration, contaminants of emerging concern[3] are not addressed in this Phase I ESA. Addressing contaminants of emerging concern is considered to be outside of the normal Phase I ESA scope of work under ASTM E1527-21 and therefore contaminants of emerging concern were not considered in this report.

It is important to note that on April 19, 2024, the USEPA issued a final rule designating perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), as "hazardous substances" under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). As a result of this designation, the scope of this Phase I ESA includes an evaluation of the potential presence of both PFOA and PFOS.

A Site visit was conducted on December 5, 2025 by Ms. Jodi Beck of Aspen Environmental. Ms. Beck is an "Environmental Professional" (as defined under the ASTM Practice E1527-21) and her professional qualifications are presented in Section 11.

1.3 Significant Assumptions

Except as may be noted in Aspen's proposal, no significant assumptions were taken into account by Aspen Environmental as part of this project.

[2] "Non-Scope Considerations" are described in ASTM E1527-21 and include, but are not limited to: asbestos-containing building materials, biological agents, cultural and historic resources, ecological resources, endangered or otherwise protected species/habitats, health and safety, indoor air quality, industrial hygiene, lead based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, wildlife, etc. Notably, Phase II ESA work (such as may be done through a sampling effort) is a Non-Scope Consideration.

[3] Contaminants of emerging concern are not listed by CERCLA and not considered by USEPA to meet the definition of a "hazardous substance." Similarly, contaminants of emerging concern do not meet the definition of a "petroleum product."

1.4 Limitations, Deviations, and Exceptions

This Phase I ESA was performed according to the agreed upon scope of work with the Client outlined in Aspen Environmental's November 26, 2025 proposal to Ecological Associates, Inc. and is consistent with the ASTM Practice E1527-21, except for the following:

- The User did not provide contact information for previous owners/operators of the Site and Aspen did not locate such owner/operator contact information; therefore, Aspen was unable to interview the former owners/operators of the Subject Site, pursuant to ASTM E1527-21 guidance.

- The ASTM E1527-21 guidance states that all obvious uses of the subject property shall be identified from the present, back to the subject property's first developed use, or back to 1940, whichever is earlier. Historical aerial photographs for the Site date back to 1943.

This Phase I ESA contains a property description and history, an environmental database review, a summary of visual observations made during the Site reconnaissance, and descriptions of information obtained during interview(s) from person(s) knowledgeable of the Site. The findings and conclusions presented in this Phase I ESA are the result of professional interpretation of the information collected at the time of this study. The Phase I ESA does not necessarily include an exhaustive search of all available records, nor does it include detailed assessment of all Phase I ESA findings. Therefore, Aspen cannot "certify" or guarantee that any property is free of environmental impairment; no warranties regarding the environmental quality of the property are expressed or implied.

1.5 Special Terms and Conditions

Except as may be noted in Aspen's proposal, no special contractual terms or conditions were taken into account as part of this project.

1.6 User Reliance

This Phase I ESA report has been prepared solely for the benefit of Indian River County (Client). Aspen Environmental, LLC has issued the Phase I ESA Report to Indian River County, care of Ecological Associates, Inc., and grants the Client the right to rely on the report contents.

Aspen grants the Client the right to rely on the contents of this report, subject to the terms, conditions, and limitations set forth in Aspen's agreement with Ecological Associates, Inc., which are incorporated herein by reference and available upon request.

Except as specifically set forth in Aspen's proposal to the Client to perform this work, no other third party shall have the right to rely on Aspen's opinions rendered in connection with the Services without Aspen's written consent.

2. SITE DESCRIPTION

This section provides a description of the key characteristics of the Site. This description is derived from information provided by the Client and information gathered during the reconnaissance unless referenced otherwise.

2.1 Site Location and General Characteristics

According to the Indian River County Property Appraisers website, the Site is comprised of a single parcel that consists of approximately 19.6 acres of land, with a Use Code of 0000 - Vac Res,MH,MFam,POI,AgZN (vacant residential land that could potentially be used for mobile homes, multi-family housing, or in an agricultural zoned context — but as of the date of the Site visit, no building or residential improvements exist on the Site). The Site is located at 1350 Island Club Manor in Vero Beach, Florida (Indian River County Parcel ID 31392600000010000008.0). According to the Indian River County property appraiser's website, the Subject Site is owned by Island Manor Development, LLC. The Subject Site was observed to be in a residential area of Vero Beach, Florida.

The Subject Site was observed to be bounded by:

- Vacant wooded land (8580 Jungle Trail), a lot with a warehouse (8550 Jungle Trail) and a residential parcel (8530 Jungle Trail) to the north and northwest, with the Indian River also to the northwest;
- Vacant wooded parcel (8650 Hwy. A1A) to the east and northeast;
- Residential properties to the southeast (821 Island Club Square);
- Residential properties to the south (1201-1241 W. Island Club Square, 1425-1453 W. Island Club Square, 825-835 Island Club Square); and
- Indian River to the west and southwest.

The Site location is shown in **Figure 1** and a Site layout is provided on **Figure 2**. Recently obtained tax parcel/map information is provided in **Appendix A-1**. No other location information was provided to Aspen Environmental by the Client.

2.2 Current and Former Uses of the Site

At the time of Aspen's performance of this Phase I ESA, the Subject Site consisted of a single parcel of mostly cleared vacant land.

According to historical sources, the Subject Site appears to have been used as a citrus grove from at least 1943 through approximately 1999. From 2005 through 2007, the citrus groves appeared to be fallow and overgrown. By 2010, the Subject Site had been cleared; however, the Site remained vacant through the time of the December 2025 Site visit.

Additional historical land use and environmental-related information is provided in **Section 4** of this report.

2.3 Description of Structures, Roads, Other Improvements on the Subject Site

No structures or roads were identified on the Subject Site during the December 5, 2025 Site visit. Remnants of a possible historical well or irrigation system were observed on the western portion of the Site. Water-filled ditches/canals were present on the northwestern portion of the Subject Site. No other structures or improvements were observed.

Storm water at the Subject Site is believed to infiltrate into the subsurface. No evidence of aboveground or underground storage tanks was observed at the Site.

Access to the Site was obtained via Jungle Trail. Site characteristics are presented on **Figure 2**.

2.4 Current and Prior Use of Adjoining Properties

At the time of completion of this Phase I ESA, the land use in the area surrounding the Subject Site was primarily residential and/or vacant wooded parcels. In summary, the area land use immediately surrounding the Subject Site was noted to be as follows:

	Current Aspen-Observed (December 2025) Use	Identified Prior Use	Considered to be More Likely to Result in Environmental Quality Impacts to the surface or subsurface (Yes/No)
North	Vacant wooded land and a cleared lot with a warehouse	Vacant, wooded land, followed by citrus groves	No
East	Vacant wooded land	Vacant wooded land (with citrus groves to the southeast)	No
South	Residential	Citrus groves dating back to the 1940s	Yes
West	Indian River	Indian River	No

* Some land uses (such as some types of commercial/industrial and agricultural land uses) are considered to have at least a moderate potential to have adversely affected the subsurface.

2.5 Physical Setting l

2.5.1 Topography and Geology

Figure 1 shows the location of the Site, as indicated on the United States Geological Survey (USGS) Sebastian, Florida/Riomar, Florida/Vero Beach, Florida (most recent revision: 2024) 7.5-minute quadrangle maps. Aspen Environmental obtained a physical setting report for the area of the Subject Site from Environmental Risk Information Services (ERIS). According to the ERIS report (**Appendix B**), the Subject Site has an elevation of approximately 2.78 feet above mean sea level. Based on the topographic maps provided by ERIS and Site observations, the Subject Site appears to be slightly uneven with a slope to the north. The ERIS report identified soils on the Subject Site as largely Canaveral fine sand, 0 to 5 percent slopes, which are somewhat poorly drained and Captiva fine sand, frequently ponded, 0 to 1 percent slopes, which are poorly drained. The ERIS database search identified the regional geology underlying the Site to consist of Anastasia Formation of the Pleistocene era and Holocene Sediments. The Anastasia Formation generally is recognized near the coast but extends inland as much as 20 miles (32 kilometers) in St. Lucie and Martin Counties. The Anastasia Formation, named by Sellards (1912), is composed of interbedded sands and coquinoid limestones. The most recognized facies of the Anastasia sediments is an orangish brown, unindurated to moderately indurated, coquina of whole and fragmented mollusk shells in a matrix of sand often cemented by sparry calcite. Sands occur as

light gray to tan and orangish brown, unconsolidated to moderately indurated, unfossiliferous to very fossiliferous beds. The Anastasia Formation forms part of the surficial aquifer system.

The Holocene sediments in Florida occur near the present coastline at elevations generally less than 5 feet (1.5 meters). The sediments include quartz sands, carbonate sands and muds, and organics.

2.5.2 Hydrogeology

According to the Physical Setting Report for the Subject Site, freshwater forested/shrub wetlands are located along the northern border and the eastern portion of the Subject Site. The nearest surface water bodies off-Site include two un-named ponds/stormwater features located within 1/8-mile south and southeast of the Subject Site and the Indian River located immediately adjacent to the west of the Subject Site. The Atlantic Ocean is located approximately 1/2-mile east of the Subject Site. In general, groundwater flow directions may vary depending on area groundwater pumping, surface water bodies, land use and development, localized topography, and other macro and micro features. Shallow groundwater flow at the Subject Site is projected more often to be to the west towards the Indian River or to the east towards the Atlantic Ocean. Data provided in the December 2009 Site Assessment Report prepared by Kimley Horn & Associates, Inc. for a nearby site (Jones Pier) located approximately 1-mile south southeast of the Subject Site, indicated a groundwater flow direction to be to the west, which supports this prediction. Based on review of this report, first groundwater is expected to be encountered approximately 2-4 feet below ground surface at the Subject Site.

A search of Federal and state water-well databases identified over one hundred well records within one mile of the Subject Site, including:

- Zero Public Water Systems Violations and Enforcement Data wells. This database contains a list of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water.

- Zero Safe Drinking Water Information System (SDWIS) wells. This database contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states.
- Zero U.S. Geological Survey's (USGS) National Water Information System (NWIS) wells. This database contains comprehensive information regarding well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP).
- Zero Florida Subsidence Incident Report. Sinkholes are closed depressions in areas underlain by soluble rock such as limestone, dolostone, and in some states gypsum and salt. Other subterranean events can cause holes, depressions, or subsidence of the land surface that may mimic sinkhole activity. Commonly, a reported depression is not verified by a licensed professional geologist to be a true sinkhole, and the cause of subsidence is not known. Such an event is called a subsidence incident.
- Zero Public Water Supply Wells. The Public Water Supply Wells (PWSW) data consist of public water supply facilities and their wells in Florida, excluding Federally owned facilities.
- Greater than one hundred Water Well Completions – St. Johns River Water Management District. This database contains a list of wells in the Water Well Completion Report database made available by the St. Johns River Water Management District (SJRWMD).
- Three Water Well Construction Permit. This database contains a list of water well construction permits issued by the St. Johns River Water Management District (SJRWMD).
- Zero Well Surveillance Program Water Wells. This database contains a list of privately and publicly owned potable wells from the Florida Department of Health's (DOH) Well Surveillance Program.

Of these wells mentioned above, none were listed in the ERIS PSR as being on the Subject Site. Additional information concerning nearby wells can be found in the ERIS PSR report in **Appendix B**.

3. USER-PROVIDED INFORMATION

This section describes the information requested from the User of this Phase I ESA in the form of a User Questionnaire provided by Aspen Environmental.

3.1 Title Records

Aspen was not provided with and did not review title records for the Site. A property title search was not included in the scope of Aspen's services. The User did provide Site location information.

3.2 Environmental Liens or Activity and Use Limitations

The User was not aware of any Environmental Liens or Activity and Use Limitations for the Subject Site.

3.3 Specialized Knowledge

The User indicated they had no specialized knowledge of the Subject Site.

3.4 Commonly Known or Reasonably Ascertainable Information

The User indicated they had no commonly known or reasonably ascertainable information (as defined in AAI) regarding the Site.

3.5 Valuation Reduction for Environmental Issues

The User has not informed Aspen regarding whether or not the valuation of the Site has been reduced or otherwise impacted by environmental issues (as defined in AAI) at the Site.

3.6 Owner, Property Manager, and Occupant Information

The User supplied Aspen with the following contact information for the Site representative:

- Alan Wilkinson (owner)

3.7 Reason for Performing This Phase I ESA

Aspen understands that the Client engaged Aspen to perform this Phase I ESA for the Site to identify "Recognized Environmental Conditions" (as defined in ASTM E1527-21) as part of their efforts to purchase the Site.

3.8 Additional Information

The User provided Aspen with several environmental reports. These are listed below and are described in more detail in **Section 4.3**:

- *Environmental Assessment Report*, prepared by Ecological Consulting of Florida and dated February 18, 2022.
- *Jungle Trail Island Manor Property - Indian River County Environmental Bond (2024)* that was prepared by Water and Air Research, Inc.
- *Environmental Impact Report For Oak Hammock Parcel*, prepared by Florida Environmental Consulting, Inc. and dated May 11, 2023.
- *Gopher Tortoise Survey,* prepared by Florida Environmental Consulting, Inc. and dated May 2, 2023.
- *Map of Boundary and Tidal Water Survey,* prepared by Indian River Survey, Inc. and dated August 13, 2024.
- *Tree Health Survey Memorandum,* prepared by Advanced Restoration Ecology, Inc. and dated December 16, 2024.

A copy of these reports are included in **Appendix A-2**.

4. RECORDS REVIEW

Aspen's records review consisted of the following, to the extent available and reasonably ascertainable: i) review of identified federal, state, and local environmental databases; ii) review of identified historical aerial photographs; iii) review of identified historical topographic maps; iv) review of identified City Directories; v) review of local authority permits/records; and vi) review of available property tax information. Aspen also attempted to obtain fire insurance maps for the Site; however, none were available.

4.1 Standard Environmental Records Sources

4.1.1 Database Search Approach

Aspen contracted with ERIS to provide portions of the records reviewed as described below. The environmental database search was performed by ERIS in an attempt to ascertain whether the Site or neighboring properties were suspected of having environmental conditions that could have impacted the surface or subsurface conditions in a way which could be considered a REC for the Site. Specific records and search distances (from the approximate Site boundaries) for the environmental databases were reported by ERIS to be consistent with ASTM Practice E 1527-21 and are discussed in the ERIS Database Report (presented in **Appendix C**). Database descriptions are also included in the ERIS report and are summarized in **Table 1**.

4.1.2 Database Search Results – Subject Site

The Subject Site was not reported by ERIS to be in any of the databases searched.

4.1.3 Database Search Results – Vicinity Properties

The search of environmental databases identified several sites in multiple databases. Notably, no sites located within 1/2-mile of the Subject Site were listed in databases indicative of a release. Details of nearby listed sites are summarized in **Table 1**.

ERIS identified multiple sites on various databases such as FINDS/FRS and STCS, which are listings typically associated with the management of chemicals and waste and are not per se indicative of releases or spills at these locations.

4.1.4 Unmapped Sites

No unmapped sites were identified in the ERIS Database Report.

4.2 Historical Use Information

Aspen contracted ERIS to provide standard historical records, including aerial photographs, topographic maps, fire insurance maps, and city directories. The sections below identify and summarize the historical information sources sought/reviewed for the Site and vicinity. A summary of the findings from the review of these historical record sources provided by ERIS is included in **Table 2** which is illustrated below at the end of Section 4.2.

4.2.1 Historic Aerial Photographs

An aerial photograph review was conducted to help evaluate past uses of the Subject Property as well as adjoining properties. Aspen requested the ERIS aerial photo package, which included aerial photographs from 1943, 1951, 1957, 1968, 1970, 1974, 1984, 1994, 1999, 2005, 2006, 2007, 2010, 2013, 2015, 2017, 2019, 2021 and 2023. A copy of the aerial photographs package is included as **Appendix D** to this report.

4.2.2 Historical Topographic Maps

ERIS supplied portions of USGS topographical maps of the Site and vicinity for 1949, 1950, 1970, 1983, 2015, 2021 and 2024. A copy of the historical topographic maps package is included as **Appendix E** to this report.

4.2.3 Fire Insurance Maps

Aspen Environmental attempted to obtain Fire Insurance maps for the Site and/or vicinity; however, none were available. A copy of the No Coverage report is included as **Appendix F** to this report.

4.2.4 City Directories

A search of historical City Directories for the area of the Site was conducted by ERIS. Business directories including cross reference, and telephone directories were reviewed, if available in the ERIS report, for 1927-28, 1953, 1956, 1960, 1964, 1968, 1973, 1978, 1983, 1988, 1993, 1997, 2000, 2003, 2008, 2012, 2016, 2020, 2023 and 2024. Information for several nearby properties was found in the directories searched. The ERIS Historical Directory Report is included as **Appendix G** to this report.

4.2.5 Property Tax Records

Aspen searched the online Indian River County Property Appraiser's website[4] to obtain records associated with the Subject Site. According to the Indian River County Property Appraiser's website, the Site is comprised of a single parcel (Parcel ID number: 31392600000010000008.0). The information retrieved included property boundary information, including parcel and tax identification numbers and property type. Documents obtained indicated that the Subject Site is currently owned by Island Manor Development, LLC who has owned it since 2022. The retrieved tax maps and parcel information sheets associated with the Site are provided as **Appendix A-1** to this report.

Table 2 – Historical Records Review - Aspen Observations			
Aerial Photographs	**Topographic Maps**	**Fire Insurance Maps**	**City Directory (CD)**
Subject Site: **1943-1957:** The majority of the Subject Site is a citrus grove. Small areas on the easternmost and westernmost portion of the Subject Site are forested. No structures appear visible. **1968:** The majority of the Subject Site remains a citrus grove; however, a small area along the northern property boundary appear to have been cleared. **1970:** What appears to be three large linear ditches with adjacent excavated material are present along the northwestern boundary of the citrus grove. **1974:** The Subject Site remains a citrus grove, though the western portion appears fallow. There appear to be clearly defined ditches along the western and northwestern boundary of the citrus grove. **1984:** The western portion of the grove no longer appears fallow. **1994-1999:** The majority of the Subject Site remains a citrus grove. Water is visible in the ditches along the northwestern boundary of the citrus grove. **2005-2007:** The citrus grove has become fallow and the Subject Site appears heavily vegetated and	**Subject Site:** **1949:** The majority of the Subject Site is depicted as a citrus grove with some forested portions along the northern, western and eastern property boundaries. **1950:** The topographic map appears to have been pieced together for this year. The Subject Site appears vacant. **1970:** The majority of the Subject Site is depicted as a citrus grove with some forested portions along the northern, western and eastern property boundaries. **1983:** The topographic map appears to have been pieced together for this year. The Subject Site appears vacant. **2015-2024**: Subject Site is depicted as vacant. It should be noted that no structures are visible on the map, as the topographic maps for these years do not show structural detail. **Vicinity:** **1949:** Citrus groves are visible immediately south of the Subject Site. The Intracoastal Waterway/Indian River is visible immediately west of the Subject Site, followed by a group of islands. The area immediately east of the Subject Site is depicted as vacant, vegetated land. The Atlantic Ocean is present approximately 1/2-mile east of the Subject Site. The area	**Subject Site:** No Fire Insurance Maps Available **Vicinity:** No Fire Insurance Maps Available	**Subject Site:** **1927-28:** Street not listed **1953-2024:** Street not listed/No listing found. **Vicinity:** **1927-1997:** **Seacrest Dr.:** Street not listed **W. Aerial Photographs	**Topographic Maps**	**Fire Insurance Maps**	**City Directory (CD)**
overgrown. Water is still visible in the ditches along the western and northwestern boundary of the citrus grove. **2010:** The citrus grove has been cleared. Two small strips of trees are present in the central portion of the Site and a partially forested area remains on the eastern portion of the Site. **2013:** The Subject Site appears to be grassy, vacant land with two strips of trees in the central portion of the Site and a forested area on the eastern and western portions of the Site. The ditches/canals remain visible on the northwestern and western boundaries of the former grove area. **2015-2021:** No significant changes. **2023:** Some clearing appears to have occurred on the western portion of the Subject Site. **Vicinity:** **1943:** A citrus grove is present immediately south of the Subject Site. The areas immediately north and east of the Subject Site are vacant, forested land. Citrus groves are present within 1/4-mile north of the Subject Site. The Indian River is present immediately west of the Subject Site.	immediately north of the Subject Site is depicted as vacant vegetated land, followed by citrus groves (approximately 1/8- to 1/4-mile north). **1950:** The topographic map appears to have been pieced together for this year. The area immediately north of the Subject Site is still depicted as vacant land, followed by citrus groves (approximately 1/8- to 1/4-mile north). The areas immediately east and west of the Subject Site are similar to the 1949 photograph. The area immediately south of the Subject Site is depicted as vacant land (no citrus groves are shown). **1970:** Citrus groves are again visible immediately south of the Subject Site. The Intracoastal Waterway/Indian River is visible immediately west of the Subject Site, followed by a group of islands. The area immediately east of the Subject Site is depicted as vacant, vegetated land. Highway A1A is depicted just over 1/4-mile east of the Subject Site. The Atlantic Ocean is present approximately 1/2-mile east of the Subject Site. The area immediately north of the Subject Site is depicted as vacant vegetated land. The citrus groves that were previously located approximately 1/8- to 1/4-mile north of the Subject Site now appear fallow.		**Island Club Mnr:** No listing found **2008:** **Seacrest Dr.:** Residential (8460-8625), La Bendicion (8525) **W. In summary, the review of aerial photographs, topographic maps, and/or city directories revealed usages (e.g.: agricultural land use) which may be indications of likely hazardous materials/chemical storage, management/usage, or disposal at/near the Subject Site which could pose a threat to the soil and/or groundwater quality at the Subject Site.			

4.3 Other Documents

4.3.1 Previous Reports Reviewed for the Site

Indian River County personnel provided Aspen Environmental with several environmental reports pertaining to the Subject Site. These are described below:

- *Environmental Assessment Report*, prepared by Ecological Consulting of Florida and dated February 18, 2022. This report indicated the presence of wetlands and Gopher Tortoise burrows on the Subject Site.

- *Jungle Trail Island Manor Property - Indian River County Environmental Bond (2024)* that was prepared by Water and Air Research, Inc. This report indicated that the Subject Site is contiguous with one of the last large remaining mature maritime hammocks in the county. It contains a mix of cleared citrus grove land with shrub marsh, mangrove swamp and salt marsh estuarine wetlands. The report also indicated that the process of establishing recreational opportunities will require an inventory of the area to determine appropriate locations for activities, as well as other items. According to the report, examples of potential recreation at this site include boating, bank fishing, wildlife viewing, and hiking.

- *Environmental Impact Report For Oak Hammock Parcel*, prepared by Florida Environmental Consulting, Inc. and dated May 11, 2023. This report indicated that land development improvements to the Oak Hammock Parcel (Subject Site), unless properly planned and permitted, may cause adverse environmental impacts to native trees, protected species, and wetlands.

- *Gopher Tortoise Survey,* prepared by Florida Environmental Consulting, Inc. and dated May 2, 2023. This report indicated the presence of numerous Gopher Tortoise burrows on the Subject Site.

- *Map of Boundary and Tidal Water Survey,* prepared by Indian River Survey, Inc. and dated August 13, 2024.

- *Tree Health Survey Memorandum,* prepared by Advanced Restoration Ecology, Inc. and dated December 16, 2024. This report indicated that the most common defect found in the trees on site were heavy signs of basal rot and rotting branches. Also noted in some of the trees were multiple areas of deep penetrating trunk rot, likely also having heartwood rot.

A copy of these reports are included in **Appendix A-2.**

No other environmental reports were provided by the Client for review.

4.3.2 Publicly Available Records for Nearby Properties

Information Found Through Public Records Search on FDEP Website

Because of the nature of some of the information reviewed for nearby properties (see **Table 1** and below), Aspen sought environmental cleanup documents relating to nearby sites. The FDEP is commonly the lead environmental agency for contamination issues in this area and, as a result, for these properties, FDEP files were retrieved from FDEP's online Information Portal database and reviewed. A summary of Aspen's review of Information Portal records from this file review for these properties is included below. Selected copies of some portions of some of the reviewed documents are included in **Appendix A-3**.

- **Fischer Residence** (ERIS Map ID 1) (this property is shown on the ERIS map to be within 1/8-mile west of the Subject Site and in the FINDS/FRS database). According to the database report, this facility has a Construction Stormwater General Permit (Identifier: FLR10XA94). No violations were identified. Therefore, this site is not expected to have impacted the Subject Site.
- **The Island Club of Vero Beach** (ERIS Map ID 2) (this property is shown on the ERIS map to be within 1/8-mile east southeast of the Subject Site and in the FINDS/FRS database). According to the database report, this facility had a Construction Stormwater General Permit (Identifier: FLR10HN89). According to the USEPA Detailed Facility

Report, the facility's permit has been terminated. No violations were identified. Therefore, this site is not expected to have impacted the Subject Site.

- **Indian River County – Sea Oaks WWTF.** (ERIS Map ID 3) (this property is shown on the ERIS map to be approximately 1/4-mile northeast of the Subject Site and listed in the STCS database). According to the database report, this facility had a 1,000-gallon emergency generator diesel underground storage tank (UST) and a 1,000-gallon emergency generator diesel aboveground storage tank (AST). Both have been removed from the site. Based on the distance of this site to the Subject Site, the lack of documented releases and that this site is not located in a direction projected to be upgradient of the Subject Site it is not expected to have impacted the Subject Site.
- **Jones Pier Vero Beach** (ERIS Map ID 4) (this property is shown on the ERIS map to be approximately 1-mile south southeast of the Subject Site and listed in the ERIC and WCRPS databases). According to FDEP files, environmental due diligence activities indicated the presence of soil and groundwater contamination at the site, which was a former citrus grove. A Site Assessment Report was prepared in 2009 by Kimley Horn & Associates, Inc., which found concentrations of dieldrin in soils that exceeded the leachability to groundwater cleanup target levels. Elevated concentrations of ammonia were detected in groundwater; however, Kimley Horn attributed this to naturally occurring conditions and recommended no further assessment. In May 2010, FDEP indicated that the Site Assessment Report was incomplete and required additional information. A Site Assessment Report Addendum (SARA) was submitted in August 2010 by Kimley Horn, which was accepted by FDEP. The SARA included a proposal for site closure under Risk Management Option Level II of Rule 62-780.680(2), Florida Administrative Code (F.A.C.). A February 22, 2011, Draft Declaration of Restrictive Covenant was submitted by Indian River County and FDEP concurred that a Site Rehabilitation Completion Order with institutional controls placed on the soil and groundwater was appropriate for this site. In March 2011, a Site Rehabilitation Completion Order (SRCO) without Conditions was issued by FDEP for the site. An inquiry has been made to FDEP regarding this; however,

based on this SRCO, and the distance of this site from the Subject Site, it is not expected to have impacted the Subject Site.

Additional information regarding these sites can be found in the database report in **Appendix C** and in **Table 1**.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A reconnaissance of the Subject Site was conducted by Aspen representative Jodi Beck on December 5, 2025. Selected photographs taken during the reconnaissance are included in **Appendix H**. Adjoining properties were peripherally observed from the perimeter of the Subject Site.

As part of the Site reconnaissance, Aspen looked for evidence of the presence of hazardous substances/petroleum products used, stored, or discarded, and inspected the Site for areas of disturbed or discolored soil, suspect equipment and/or building materials which may contain hazardous substances, areas of distressed vegetation, wastewater discharge areas, storage tanks/septic systems, waste management/disposal areas, lagoons, pits, sumps, surface water management areas, and stained surfaces.

5.2 Utility Service & Materials Management Provider Information

The Subject Site was vacant and undeveloped at the time of the Site visit.

5.3 Interior and Exterior Observations

Observations made during the Site reconnaissance are documented in the following table. Unless otherwise indicated, the indicated observations are only for the Subject Site. Photos taken during Aspen's December 2025 Site visit are provided in **Appendix H**.

ASTM Section	Feature or Condition	Description
Interior and Exterior Observations		
9.4.2.3 & 9.4.2.8	Hazardous Substances or Petroleum Products	No evidence of hazardous substance or petroleum products were identified during Aspen's Site visit.
9.4.2.4	Underground Storage Tanks (USTs)	No evidence of USTs were identified during Aspen's Site visit.
9.4.2.4	Aboveground Storage Tanks (ASTs)	No evidence of ASTs was identified during Aspen's Site visit.
9.4.2.5	Odors	No odors were identified during Aspen's Site visit.
9.4.2.6	Pools of Liquids	No pools of liquid indicative of a chemical release were identified during Aspen's Site visit.
9.4.2.7	Drums and Containers > 5 Gallons	No drums or containers greater than 5-gallons were identified during Aspen's Site visit.
9.4.2.9	Unidentified Substances/Containers	No unidentified substances/containers were identified during Aspen's Site visit.
9.4.2.10	PCB Items	Aspen noted no evidence of potential polychlorinated biphenyl-containing equipment/materials (light ballasts, old paints, etc.) at the Subject Site during the Site visit.
Interior Observations		
9.4.3.1	Heating and Cooling Systems	No structures were present on the Subject Site during Aspen's Site visit.
9.4.3.2	Stains/Corrosion	No structures were observed on the Subject Site during Aspen's Site visit.

ASTM Section	Feature or Condition	Description
9.4.3.3	Drains and Sumps	No structures were observed on the Subject Site during Aspen's Site visit.
Exterior Observations		
9.4.4.1	Pits, Ponds, or Lagoons	No pits, ponds, pools, or lagoons in connection with waste disposal were observed during Aspen's reconnaissance of the Site.
9.4.4.2	Stained Soil or Pavement	No stained pavement or soil was observed on the Subject Site during the Site visit.
9.4.4.3	Stressed Vegetation	No stressed vegetation was observed on the Subject Site during the Site visit.
9.4.4.4	Solid Waste	No solid waste was observed at the Subject Site during the Site visit, with the exception of a discarded propane tank and piping on the western portion of the Subject Site.
9.4.4.5	Wastewater or Stormwater Discharge	No stormwater drains were observed at the Subject Site during the Site visit.
9.4.4.6	Wells	Piping remnants were identified on the western portion of the Subject Site during Aspen's Site visit. The exact nature of the piping could not be determined; however, it could possibly relate to irrigation. According to the Physical Setting Report and the St. John's Water Management District, there are no records of wells on the Subject Site.
9.4.4.7	Septic Systems	No evidence of septic systems were observed on the Subject Site during Aspen's Site visit.

5.4 Adjacent Property Reconnaissance

During the Site reconnaissance, Aspen observed the adjoining properties from the Subject Site. The purpose of this observation was to attempt to identify possible sources of obvious environmental impairment emanating from the adjoining properties that could affect soil and groundwater quality at the Subject Site or result in vapor migration into the Subject Site as a result of surface water runoff, groundwater transport, or similar pathways. Based on observations of the nearby land use, Aspen noted no obvious evidence of chemical discharge to the ground (such as stained ground), no evidence of potential subsurface contamination (such as the presence of monitoring wells), or evidence of outside chemical storage (such as tanks, totes and drums) at adjacent properties.

6. INTERVIEWS

6.1 Interview with Current Owner/Occupant

Mr. Alan Wilkinson, Owner of the Subject Site, was interviewed for this Phase I ESA as a representative for the Site on December 12, 2025. Mr. Wilkinson indicated that he has owned the Subject Site since 2022 and had planned development for it; however, the Site was never developed. He indicated that the Site had been a former citrus grove but had been vacant for many years. Mr. Wilkinson did not have any knowledge of environmental issues associated with the Subject Site (chemical spills, discharges, contamination, etc.) and has not observed any signs of contamination, such as stressed vegetation or staining. He also indicated he was not aware of previous chemical storage or use on the Site. He stated that there are no tanks on the Subject Site; however, a neighboring residence does have a septic tank.

6.2 Interview with Previous Owner/Occupant

Aspen was not provided with contact information for any of the former property owners, nor was Aspen able to locate such information; Aspen did not conduct an interview with former owner representatives.

6.3 Interview with Local Agencies

Aspen Environmental submitted a records request to the Indian River County Fire Department on December 10, 2025 to request public records regarding emergency responses to fires, and discharge/release incidents at the Site. No records for the Subject Site were identified.

Aspen Environmental submitted a records request to the Indian River County Health Department for water well and septic records on December 10, 2025. No records for the Subject Site were identified.

As there have been no structures historically located on the Site, a records request to the Indian River County Building Department was not submitted.

St. Johns River Water Management District was contacted for information pertaining to historical wells that may have been located on the Subject Site; however no records were identified.

Copies of records obtained are included in **Appendix A-1.**

7. FINDINGS, OPINIONS, AND DATA GAPS

Aspen has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-21 of the Subject Site located in Vero Beach, Florida.

In the following sections, Aspen presents our findings and opinions, data gaps, and conclusions (Sections 7.1 through 7.3) regarding any identified or suspected recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions, and/or *de minimis* conditions associated with the Site.

7.1 Findings

This assessment revealed no Recognized Environmental Conditions (REC), one Suspected REC, no historical recognized environmental conditions (HREC), no Controlled Recognized Environmental Condition (CREC) and one *de minimis* conditions in connection with the Subject Site. Each condition is described below:

Recognized Environmental Conditions (RECs)

As defined by ASTM E1527-21, a recognized environmental condition is: "*the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;(2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

No RECs were identified by Aspen Environmental.

Suspected Recognized Environmental Conditions (Suspected RECs)

Suspected RECs are findings which Aspen Environmental concluded do not meet the definition of a REC based on the information Aspen Environmental obtained; however, a suspected REC finding does indicate Aspen Environmental believes there is at least a moderate potential to indicate that surface or subsurface quality impacts remain at the Site as of the writing of this Phase I ESA. The following suspected RECs were identified:

- **FINDING A (Historic Use of the Site):** Historical sources indicate that the Subject Site was utilized as a citrus grove from at least the early 1940s through the late 1990s or early 2000s. Citrus production in Florida during this period commonly involved the application of nitrogen-based fertilizers, which can result in elevated nitrate concentrations in groundwater. Additional potential contaminants of concern include metals, organochlorine pesticides, herbicides, ammonia and, to a lesser extent, volatile organic compounds (VOCs) or petroleum-related compounds that may persist in soil or groundwater associated with historical agricultural activities. Based on this historical agricultural use of the Subject Site and the lack of soil or groundwater data, this condition is considered a Suspected REC.

Controlled Recognized Environmental Conditions (CRECs)

A CREC is a *"recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

No CRECs were identified during this Phase I ESA.

Historical Recognized Environmental Conditions (HRECs)

An HREC is a *"previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory*

authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).”

No HRECs were identified during this Phase I ESA.

De Minimis Conditions

A *de minimis* condition is a condition that “*generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies*”. *De Minimis* conditions are not recognized environmental conditions.

One De Minimis conditions were identified during the Phase I ESA:

- **FINDING B (Vicinity Land Use):** The surrounding land use to the north and south of the Subject Site was historically agricultural (citrus groves) dating back to the 1940s. The sites to the north and south are not located in a direction projected to be upgradient of the Subject Site; although the citrus groves to the south were located immediately adjacent to the Subject Site. These areas have since been residentially developed and therefore, this condition is considered to be de minimis.

7.2 Data Gaps

In accordance with ASTM E1527-21, this section documents data gaps in the information obtained and reviewed as part of this Phase I ESA and discusses the associated significance. A data gap is defined as being “*a lack of or inability to obtain information required by this practice [ASTM E1527-21] despite good faith efforts by the environmental professional to gather such information.*”

a) The User did not provide contact information for previous owners of the Site and Aspen did not locate such owner information; therefore, Aspen was unable to interview the former owners of the Subject Site, pursuant to ASTM E1527-21 guidance. This data gap is not

considered to be significant to the identification of RECs, as the historical use of the property was identified via historical aerial photographs and previous environmental reports for the Subject Site.

b) The ASTM E1527-21 guidance states that all obvious uses of the subject property shall be identified from the present, back to the subject property's first developed use, or back to 1940, whichever is earlier. Historical aerial photographs for the Site date back to 1943 and show the Subject Site as an established citrus grove. This is not considered to be a significant data gap. Based on the historical aerial photograph in 1943, it can be anticipated that the Site was also a citrus grove in 1940.

7.3 Conclusions

Aspen performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21, for the Subject Site, located on Island Club Manor in Vero Beach, Indian River County, Florida. Any exceptions to, or deviations from, this practice are described in **Section 1.4** of this report. This assessment has not revealed evidence of RECS, CRECs or HRECs. One Suspected REC and one de minimis condition in connection with the Subject Site were identified.

8. NON-SCOPE AND OTHER CONSIDERATIONS

8.1 Non-Scope Considerations

At the time of this writing, the User has not authorized Aspen to perform additional environmental due diligence for this Site.

8.2 Other Considerations

Perfluorooctanoic Acid (PFOA) and Perfluorooctanesulfonic Acid (PFOS)

On April 19, 2024, the USEPA issued a final rule designating perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), as "hazardous substances" under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). As a result, the potential for these chemicals to be present at the Subject Site were considered during this Phase I ESA.

PFOA and PFOS are part of a large group of lab-made chemicals known as perfluoroalkyl and polyfluoroalkyl substances (PFAS). These chemicals have been in commercial use since the 1940s and are long lasting chemicals, components of which break down very slowly over time. Due to their widespread use and their persistence in the environment, these chemicals may be found in the soil and/or groundwater at many types of sites, including manufacturing sites (e.g., chrome plating facilities, electronics manufacturers, and certain textile and paper manufacturer), waste management facilities (e.g., landfills, disposal sites, and hazardous waste sites), and facilities that use fire-fighting foam (e.g., airports, shipyards, military bases, firefighting training facilities, chemical plants, and refineries). It was also used in metal coatings to protect against corrosion, staining and weathering and was reported to be used as additives in automotive lubricant oils and hydraulic fluids, to reduce surface tension, prevent fires and evaporation.

The Subject Site has historically been utilized solely for citrus cultivation. PFAS compounds are not known to have been used in typical agricultural operations associated with citrus production, and there is no indication that PFAS-containing materials (e.g., aqueous film-forming foam [AFFF], industrial surfactants, plating operations, or wastewater biosolids) were stored or applied

at the Site. Therefore, based on the Site's historical agricultural use and lack of industrial or firefighting-related activities, the potential for PFAS occurrence at the Site is considered low. It should also be noted that there are no surrounding sites within 1/8-mile of the Subject Site that are listed in a PFAS database.

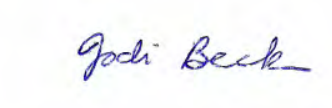
10. SIGNATURE BY ENVIRONMENTAL PROFESSIONAL

"I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Site. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312." Qualifications of the below-signed professionals are included in Section 12.



Signed by Jodi Beck – Aspen Environmental, LLC

11. QUALIFICATIONS OF STAFF

Jodi Beck

Ms. Beck is an Environmental Professional with Aspen Environmental, LLC with over 20 years of experience in conducting environmental site assessments (ESAs), including Phase I and Phase II ESAs, analyzing the results, and developing reports following appropriate ASTM and other regulatory guidelines. She is familiar with the current ASTM E-1527 standard, as well as EPA's All Appropriate Inquiry Rule (40 CFR Part 312) and qualifies as an Environmental Professional, as specified in EPA's All Appropriate Inquiry Rule. She has performed soil and groundwater sampling using a variety of sampling methods at numerous facilities and has supervised site remediation activities (e.g., tank removals, PCB cleanup). She is also familiar with the site assessment regulations of 62-780 and the FDEP underground storage tank closure regulations and has played a key role in obtaining several No Further Action/Site Rehabilitation Completion Orders. Ms. Beck holds a Masters Degree in Engineering Management (with a focus in industrial systems) and a Bachelor of Science Degree in Biology.

TABLE

Table 1
Summary of ERIS Database Review Findings

Site: Jungle Trail Property
Vero Beach, Florida

ERIS Property Name	ERIS Map ID	Approximate Distance (miles) and Direction from the Subject Site Parcel	Is Listed Site Located in Direction which is Projected to be Upgradient from Subject Site?	ERIS-indicated Databases Associated with Listed Site	Has Contamination Been Reported at this Listed Site in ERIS Report?	Is there a Better than Average Potential for Surface or Subsurface Contamination to be Present at this Listed Site?	Is there Likelihood for Contamination at this Listed Site to have Contaminated the Subsurface (Soil, Groundwater, and/or Soil Vapor) or Surface or at the Subject Site (based on database listings?)	Does Listing Result in the Conclusion that the Listed Site is likely to be a known or suspect REC, HREC, CREC, and/or de minimis condition for the Target Property/Subject Site (if "Yes" then please see Section 7 of this report for further evaluation)?
Fischer Residence	1	<1/8-mile W	Potentially	FINDS/FRS	No	No	Low - no permit violations reported	No
The Island Club of Vero Beach	2	<1/8-mile ESE	N	FINDS/FRS	No	No	Low - no permit violations reported	No
Indian River Cnty - Sea Oaks WWTF	3	Approx. 1/4-mile NE	N	STCS	No	Yes, this site had an aboveground and an underground storage tank.	Low - no releases have been reported from this site.	No
Jones Pier Vero Beach	4	Approx. 1-mile SSE	N	ERIC, WCRPS	Yes	Yes, this site had underground storage tanks. Additionally this site was a former generator of hazardous waste with violations on record.	Low - based on the distance of this site to the Subject Site and that an SRCO was issued in March 2011	No

Groundwater flow direction, as projected in this Phase I ESA, is projected to be to the east or west

APPENDIX A-2

ASPEN REVIEWED DOCUMENTS OBTAINED FROM CLIENT FOR THE SITE

USER QUESTIONNAIRE
THIS PAGE TO BE COMPLETED BY CLIENT/USER AND PROVIDED TO ASPEN ENVIRONMENTAL

This questionnaire is provided to the client pursuant to guidance in ASTM E1527-21. In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information (if available) to the environmental professional. Aspen Environmental requests that this information be provided at the start of this project to ensure the information can be accounted for and the project can be completed on schedule and budget. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Name of Person Completing Form: Woody Swintell
Signature of Person Completing Form: [signature]
Date of Form Completion: 12/17/25

(1.) Environmental cleanup liens that are filed or recorded against the Site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law?

no - request from owner

(2.) Activity and land use limitations (AULs) that are in place on the Site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

no

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this Phase I ESA do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

no

USER QUESTIONNAIRE
THIS PAGE TO BE COMPLETED BY CLIENT/USER AND PROVIDED TO ASPEN ENVIRONMENTAL

(4.) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

not at this time

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user:

(a.) Do you know the past uses of the Site?
(b.) Do you know of specific chemicals that are present or once were present at the Site?
(c.) Do you know of spills or other chemical releases that have taken place at the Site?
(d.) Do you know of any environmental cleanups that have taken place at the Site?

please contact owner

(6.) The degree of obviousness of the presence of likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?

please contact owner

NOTE 1: For the purposes of this Phase I ESA, the "user" is defined as follows: *The user is the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the site. A user may include, without limitation, a potential purchaser of site, a potential tenant of site, an owner of site, a lender, or a site manager. The user has specific obligations for completing a successful application of this practice as outlined in EPA's All Appropriate Inquiry Rule.*

NOTE 2: In the case of a "yes" answer to any of the above questions, Aspen Environmental requests the client provide additional elaboration or documentation where applicable to fully explain the answer.

USER QUESTIONNAIRE - ADDITIONAL INFORMATION

THIS PAGE TO BE COMPLETED BY CLIENT/USER AND PROVIDED TO ASPEN ENVIRONMENTAL

Please note that in addition to answering the above questions (and providing the additional elaboration or documentation where applicable [such as in the case of a "yes" answer to any of the questions in the "User Questionnaire" provided on the previous page]), certain other information should be collected by the user, if available, and provided to Aspen Environmental. This information is intended to assist the environmental professional but is not necessarily required to qualify for one of the LLPs. From ASTM E1527-21, the information includes:

(a) the reason why the Phase I ESA is required

As part of the due diligence process for conservation land acquisition by Indian River County

(b) the type of Site and type of Site transaction, for example, sale, purchase, exchange, etc.

fee simple purchase

(c) the complete and correct address for the Site (a map or other documentation showing Site location and boundaries is helpful)

environmental assessment provided

(d) the scope of services desired for the Phase I ESA (including whether any parties to the property transaction may have a required standard scope of services on whether any considerations beyond the requirements of ASTM E1527-21 are to be considered)

data collection and assessment to provide sufficient anyalysis for IRC to have use of the property for its intended purpose

(e) identification of all parties who will rely on the Phase I ESA report

IRC

(f) identification of the Site contact and how the contact be reached

Alan Williamson walan1530@gmail.com

(g) any special terms and conditions which must be agreed upon by the environmental professional

Unknown

(h) any other knowledge or experience with the Site that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the Site and its environmental condition)

owner should respond

ENVIRONMENTAL ASSESSMENT REPORT
8510 JUNGLE TRAIL PARCEL
INDIAN RIVER COUNTY, FLORIDA

February 18, 2022

Prepared by:

ECOLOGICAL CONSULTING OF FLORIDA
850 NW FEDERAL HIGHWAY, SUITE 109
STUART, FL 34994

2215.00

1.0 INTRODUCTION

This assessment is in support of the due diligence for the subject ±19.60-acre site.

2.0 SITE LOCATION

The project is located within Section 26, Township 31 South, Range 39 East within unincorporated Indian River County, Florida (Figure 1). Specifically, the project is located on the east side of Jungle Trail approximately 0.8 of a mile south of CR 510 immediately east of the Intracoastal Waterway.

The parcel is a vacant tract that appears to be disturbed from past residential and agricultural land uses. Bordering land uses include residential to the south, Jungle Trail, the Indian River and a single-family residence to the west, vacant forested properties to the north and east. Access to the site was from Jungle Trail.

3.0 METHODOLOGY

The assessment methodology consisted of the review of topographic information, soils maps, and recent aerial photographs.

A field reconnaissance of the subject parcel was then conducted which included pedestrian transects through the parcel to map and identify specific habitat and land uses and vegetative cover types. A perimeter transect was conducted to confirm features that extend off site. Field notes were taken and an aerial photograph was marked with land use and cover types and any environmental findings.

4.0 TOPOGRAPHY/HYDROLOGY

According to the U.S.G.S. topographic quadrangle (Sebastian, FL), the site is relatively flat with the western half of the site being at elevation 5, with a slight raise above this elevation further east (Figure 1). The site appears to have citrus groves on the majority of the site with one structure noted in the northwest corner. A trail road and ditching is noted on the topographic map. Surrounding properties are either undeveloped or citrus grove based on the topographic map. One small portion of the site crosses Jungle Trail and is shoreline along Indian River. The parcel is on the barrier island. Field reconnaissance indicates that the site is vacant with past signs of agriculture (beds and furrows, pond, wells, etc.) but the site has been cleared and no trees are currently present. A ditch runs along the north property line and a large pond is in the western portion. No structures are currently present.

THIS DOCUMENT, TOGETHER WITH THE CONCEPTS AND DESIGNS PRESENTED HEREIN, AS AN INSTRUMENT OF SERVICE, IS INTENDED ONLY FOR THE SPECIFIC PURPOSE AND CLIENT FOR WHICH IT WAS PREPARED. REUSE OF AND IMPROPER RELIANCE ON THIS DOCUMENT WITHOUT WRITTEN AUTHORIZATION AND ADOPTATION BY ECOLOGICAL CONSULTING OF FLORIDA SHALL BE WITHOUT LIABILITY TO ECOLOGICAL CONSULTING OF FLORIDA.

PROJECT No. 1958.00

5.0 SOILS

According to the *Web Soil Survey of Indian River County, FL* (NRCS – Web Soil Survey), the following soils are found on site (Figure 2).

1. Canaveral fine sand, 0 to 2 percent slopes (1)
2. Captiva fine sand, frequently ponded, 0 to 1 percent slopes (18)

The Canaveral fine sand soil is common on the barrier island is found on ridges in marine terraces and flats. The soil is made up of sandy marine deposits with a water table having an average depth of 18-42 inches below the ground surface. This soil is not considered hydric. The Captiva fine sands are hydric soils with a water table that can be ponded during the wet season.

On site reconnaissance indicates that soils have been disturbed on the site by past agricultural management. There are a few remnant beds and furrows still present.

6.0 SITE CONDITIONS

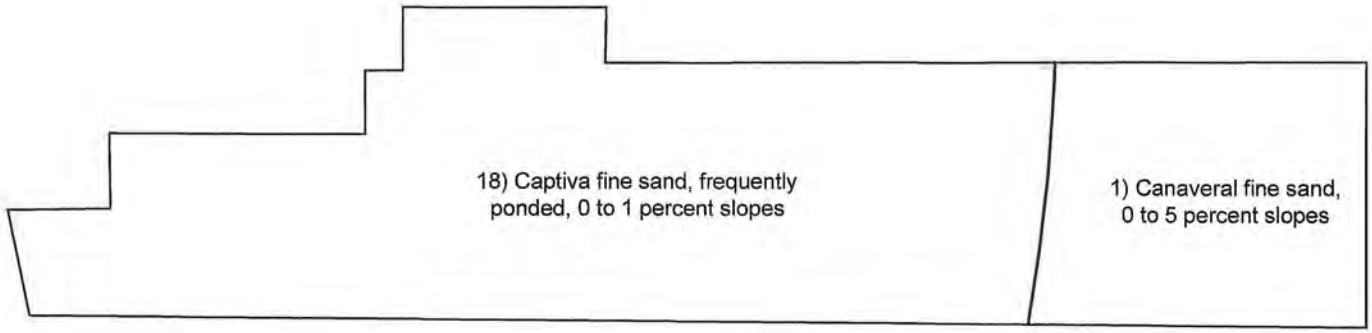
An assessment of the extent, distribution and composition of vegetative communities for the site was conducted by Chris Sopotnick of Ecological Consulting of Florida (ECF), on February 10, 2022.

ATV and Pedestrian transects were conducted throughout the site with vegetative communities mapped on a recent aerial photograph.

A description of each community type is provided in the Habitat/Land Use section of this report

7.0 HABITAT/LAND USE

Onsite habitats and adjacent land uses have been characterized using the *Florida Land Use Cover Classifications System* (FWC, 2009) (FLCCS), and are described below and depicted on the Land Use and Cover Map (Figure 3).



THIS DOCUMENT, TOGETHER WITH THE CONCEPTS AND DESIGNS PRESENTED HEREIN, AS AN INSTRUMENT OF SERVICE, IS INTENDED ONLY FOR THE SPECIFIC PURPOSE AND CLIENT FOR WHICH IT WAS PREPARED. DATE: 2-18-22

PROJECT No. 1958.00

- 1126 – Oak-Cabbage Palm: This habitat has a canopy dominated by live oaks (*Quercus virginiana*) and associated cabbage palms (*Sabal palmetto*). Understory vegetation includes scattered beauty berry (*Callicarpa Americana) and* Guinea grass. The understory was recently mowed in this area and therefore little understory was present.

- 1126D – Oak-Cabbage Palm, Disturbed: This habitat has a similar canopy to 1126 with a canopy dominated by live oaks and cabbage palms. These areas are linear features, north south in the herbaceous area. These were cleared of native understory with the overstory being a sparse canopy. These areas appear to be windbreaks in the past agricultural areas and separate groves.

- 1710 – Mowed Grass: This habitat has been cleared of native vegetation and currently has a cover of bahia grass (*Paspalum notatum*), Bermuda grass, guinea grass (*Megathyrsus maximus*) and panicums.

- 2100 – Freshwater Non-Forested Wetlands, Disturbed: The site has low areas throughout. The western portions appear naturally low with the linear north/south ones in the eastern portion appearing man made. This area is highly disturbed with sedge (Carex spp), Guinea Grass, Bermuda grass, torpedo grass and frog fruit (*Phyla nodiloflora*) present.

- 3210 Artificial/ Farm Pond: This feature has linear side slopes and appears to have been excavated to support the past agricultural uses on site. Wells were observed near the pond. The wells were closed and no flow was observed. The pond did not appear to have an outfall off site. The pond had vegetation including leather fern (*Acrostichum danaeifolium*) present, otherwise it was open water.

- 4220 - Ditch: A small ditch runs along the north property line form the east towards the west. This ditch is not vegetated and included evidence of hydrology at the time of assessment. There was no outfall for the ditch observed.

- 5521 – Mangroves: This area is located along the shoreline of the Indian river and consists of three separate areas. These areas are dominated by red mangroves (*Rhizophora mangle*).

TABLE 1 – LAND USE AND COVER SUMMARY			
FLCCS CODE	COMMUNITY NAME	ACRES	PERCENT
1126	Oak-Cabbage Palm	2.05	10.5
1126D	Oak-Cabbage Palm, Disturbed	1.75	8.9
1710	Mowed Grass	10.75	54.8
2100	Freshwater non-Forested Wetlands, Disturbed	3.49	17.8
3210	Artificial/Farm Pond	1.31	6.7
4220	Ditch	0.14	0.7
5251	Mangrove	0.11	0.6
Total Area		19.60	100.0

8.0 CRITICAL HABITAT/ LISTED SPECIES OBSERVATION

A cursory habitat assessment made during this event determined if the habitat was suitable for listed species that generally utilize the area.

Site inspection identified several potentially occupied tortoise burrows on the site. This species is listed as threatened by the FWC. The FWC regulates impacts to the tortoise, its eggs and their burrows. A buffer of 25-feet is required or permitting and relocation of this species.

No other listed species were identified during any of the survey events. Non-listed wildlife or signs of species observed include armadillo, cottontail rabbit and raccoon (tracks/scat). All species of wildlife observed are typical representatives of the habitats on site. None are unusual for the Indian River County area.

A database search of FWC records for documented bald eagle nests was conducted and none were noted for the property or within 0.5 mile of the site.

The Florida Natural Areas Inventory (FNAI) provides a matrix by County of rare and endangered species in Florida. Based on the known distribution and preferred habitats of certain species, the following listed wildlife has the potential to occur on site:

TABLE 2 – FNAI LISTED SPECIES

COMMON NAME	SCIENTIFIC NAME	EVIDENCE/SIGHTING	STATUS	
			FWC	USFWS
Eastern Indigo snake	*Drymarchon corias couperi*	Not observed	T	T
Gopher tortoise	*Gopherus polyphemus*	Observed	T	
Gopher frog	*Rana capito*	Not observed	SSC	
Florida pine snake	*Pituophis melanoleucus mugitus*	Not observed	SSC

Abbreviations:

SSC = Species of Special Concern, T = Threatened
USFWS = United States Fish and Wildlife Service, FWC = Florida Fish and Wildlife Conservation Commission,

Based on the adjacent County natural lands to the north, a general listed species survey meeting the FWC guideline requirements is recommended prior to permitting to confirm no listed species utilize the site.

9.0 WETLANDS AND SURFACE WATERS

The soils map, topographic map and National Wetland Inventory were reviewed to identify potential wetland areas. Subsequent field reconnaissance was performed to confirm limits of wetlands within the project site.

Review of the Soils map identified one soil that is considered hydric; Captiva fine sand, frequently ponded. These soils have a water table within 12 inches of the ground surface and can be ponded during the wet season. The soil horizons have been altered from past agricultural activities on site, however hydric indicators are still present.

The topographic map identified an elevation of between 5-10 NGVD on the east side of the site. This elevation drops towards the west and the Indian River across Jungle Trail. Review of the site indicates that agricultural improvements have altered the elevation with beds, furrows, and a pond.

The National Wetland Inventory Map (NWI) was reviewed for the subject parcel (Figure 4). The NWI map identified a Freshwater Forested/Shrub Wetland that extends from the vacant lands to the north and east extending on site in the northwest and northeast portions of the site.

On site reconnaissance identified several potential wetlands on site (2100D) (Figure 5). These areas have been classified as wetlands based on the soils and hydrology present, along with the vegetation. Although the vegetation appears to be ruderal grasses and weeds the majority of this cover is classified as either facultative or obligate and therefore considered hydric. The mangrove areas (5251) are also considered wetlands and have traditional native vegetation present (red mangroves).

The Artificial / Farm Pond and the ditch would be classified as other surface waters.

Based on the above review, it is anticipated that the St. Johns River Water Management District (SJRWMD), and potentially the US Army Corps of Engineers (USACOE) may exert jurisdiction over the low-lying areas defined as wetlands in this report. It is recommended that a pre-application meeting be conducted with SJRWMD to confirm the limits of wetlands.

PROJECT No. 1958.00

10.0 EVIRONMENTAL PERMITTING

If confirmed as wetlands, the agencies will require permits for unavoidable impacts.

At the state level, SJRWMD will require an Environmental Resource Permit (ERP). This permit combines both the stormwater and wetland/surface water review for this agency. As part of the stormwater permitting for this site SJRWMD will require justification and to provide site plan alternatives that considered avoidance and minimization of the impacts. Upon satisfying review staff that the impacts are unavoidable mitigation would have to be proposed. An ERP permit is issued to address the stormwater and wetland impacts jointly.

Federal wetland permitting is handled by the USACOE 404 process. At the time of this assessment no connection to offsite ditching was observed. It should be noted that there appears to be a low spot with rebar that may have a buried culvert to the Indian River along the western boundary just north of the pond. This area should be investigated further to confirm if the site has an outfall to Waters of the US. If connected the USACOE will require a Nationwide or General Permit, depending on how much of the wetlands are impacted. Mitigation would be required for wetland impacts. In addition, due to the wetlands being potential forage area for wood storks, a foraging biomass assessment for this species would need to be prepared to confirm that the function the wetlands are currently providing can be offset, either on site or through regional mitigation.

Review of the SJRWMD database indicates that the project will fall within the service boundary of Basin 22 and CGW mitigation banks. The database shows that Basin 22 has potentially has credits available to offset impacts on this site.

A preliminary Unified Mitigation Assessment Methodology (UMAM) was performed on the Freshwater Non-Forested wetlands to determine the function and potential mitigation that would be required if impacted. These wetlands scored a functional value of 0.433. This value is considered the functional loss of wetlands, multiplied by the acreage of impact and this number is equivalent to the number of credits necessary to offset the impacts (i.e. 0.433 functional loss x 1.0 ac = 0.433 credit). It should be noted that this UMAM score would have final approval by the agencies.

Permitting of gopher tortoises is regulated by the FWC. If impacts occur within twenty five feet of a potentially occupied burrow a permit must be obtained to relocate the tortoise. Based on the number of burrows identified on site the FWC would require a Conservation permit and tortoises to be relocated to a recipient site. The permit is good for one year and is obtained after local approvals have been approved and prior to construction. The permitting and relocation can generally be done within 60 days.

11.0 CONCLUSION

The subject property is a vacant vegetated parcel. The parcel exhibits natural lands and altered lands typical in the county.

Review of the parcel identified potential wetland areas and surface waters that may be considered jurisdictional by state and federal agencies. The mangrove wetlands along the shoreline are intact but narrow and are considered medium to high quality. Impact other than a dock would not be justified. The wetlands and surface waters on the property east of Jungle Trail are marginal and considered low quality. Based on the soils and hydrology present the SJRWMD and potentially USACOE would likely exert jurisdiction. It is recommended that the wetlands be delineated and a pre-application meeting with SJRWMD be requested to confirm the limits of the wetlands.

Several tortoise burrows were observed on site. The permitting and relocation of these burrows will need to occur prior to site development. The regularly ponded areas could be considered foraging habitat for wading birds. If federal permits are required a biomass forage assessment will be required to confirm that this area is being offset either on site or as part of the mitigation. No evidence of other listed species were observed on site, however based on the adjacent natural area a listed species survey is recommended.

1.0 JUNGLE TRAIL ISLAND MANOR PROPERTY

The Jungle Trail Island Manor Property, Environmental Bond Nomination Number 2, was nominated by a representative of Island Manor Development LLC with the anticipated acquisition type of Fee Simple.

1.1 LOCATION

The property is in eastern Indian River County on Tax Parcel # 31392600000010000008.0 (Figure 1). The west boundary of the property lies along approximately 58m of the east bank of the Indian River/Intercoastal Waterway across from Orchid Isle Estates. Jungle Trail road runs along the west boundary. The western portion of the northern boundary is adjacent to largely undeveloped land and the remaining portion of the north border, and all of the eastern boundary abut Captain Forster Hammock Preserve Conservation Area. The southern boundary is bound by a residential development, Island Club Manor.

1.2 SIZE

The property is an approximately 19.36-acre irregular shaped rectangle approximately 130 m from north to south and is approximately 650 m wide. There is a small 0.12-acre disjunct associated polygon west of Jungle Trail along the Indian River Lagoon.

1.3 CURRENT AND FUTURE ZONING

The current land use zoning is A-1 - Agricultural-1 District (up to 1 unit/5 acres) (Version 9/04/2024) and the future land use zoning is L-2: Low-Density Residential-2 (6 Units/Acre) (Version 3/28/2024).

1.4 PENDING ZONING CHANGES AND SPECIAL OVERLAY DISTRICTS

An inquiry to the Director of Planning & Development Services for Indian River County, Chris Balter, revealed the zone classification on this parcel was effectively reclassified from A-1 to RS-3 on April 26, 2024. RS-3 zone is classified as Single-Family Residential District (up to 3 units/acre).

2.0 VEGETATIVE COMMUNITIES

The Jungle Trail Island Manor property straddles two major vegetative community types within Indian River County. The far western side of the property resides in the Indian River Lagoon and associated estuarine wetlands portion of the county, and most of the parcel was likely historically tropical/coastal hammock (maritime hammock, FNAI).

2.1 LAND USE AND LAND COVER

There was one natural community type, and five altered land use types identified on the property from the 2023 Florida Cooperative Landcover Map (CLC) (Figure 2). Approximately 88 percent of the site consists of cleared brushland that was likely formerly maritime hammock (Table 1). There was a small area (approximately 1.8-acres) of forested land on the far eastern boundary that was typed “unaltered” mixed hardwood-coniferous swamp, however within this polygon there is

some evidence of historic groundcover clearing apparent in some of the historical aerial photographs. Furthermore, this area that remained forested throughout the years was typed as wetland in the CLC map, but LiDAR indicates it is more likely upland. There is a small 0.12-acre disjunct associated polygon west of Jungle Trail along the Indian River Lagoon. The small 0.12-acre disjunct associated polygon west of Jungle Trail along the Indian River Lagoon is typed as shrub and brushland in the CLC map however this small polygon is mangrove forest with some invasive exotic plant species. The CLC map Figure 3 and Table 1 present the acreage of each land use and natural community type on the property.

Table 1. The amount of each altered land use type or natural community type on the Jungle Trail Island Manor property from the Florida Cooperative Landcover Map (2023).

Land Use/Natural Community	Acres	% Cover	Type	Up/Wet	State Rank
Shrub and Brushland (cleared)	17.0	88.0%	Altered	Upland	not ranked
Mixed Hardwood-Coniferous Swamp	1.8	9.3%	Natural	Wetland	not ranked
Mixed Hardwood-Coniferous Swamp	0.4	1.8%	Altered	Wetland	not ranked
Transportation	0.1	0.7%	Altered	Upland	not ranked
Urban Open Forested	0.02	0.1%	Altered	Upland	not ranked
Residential, Low Density	0.01	0.1%	Altered	Upland	not ranked
Total Altered	17.5	90.7%			
Total Natural	1.8	9.3%			
Total Upland	17.2	88.9%			
Total Wetland	2.2	11.1%			

*The level of disturbance within each onsite natural community has not been assessed.

The eastern portion of the site is within the coastal hammock portion of the county. Coastal hammocks (maritime hammock) in this area possess a diverse assemblage of tropical and temperate species and can vary from a mature canopy of live oaks and cabbage palms with a sparse understory of ferns and vines to a dense community of tropical hardwoods, vines, and shrubs, with a fairly open canopy of oaks and cabbage palms.

Mangrove and estuarine habitats were likely historically dominant on the western portion of the property. Characteristic species of mangrove swamps include red mangrove, black mangrove, white mangrove, and buttonwood. Brazilian pepper can be a common component especially within disturbed estuarine communities. The western portion of the property has some salt tolerant marsh species (e.g., salt bush, saltmarsh mallow, giant leather fern, common reed) and typical salt marsh within the county is an herbaceous community that occurs in the portion of the coastal zone affected by tides and seawater but protected from large waves. Dominant species often include saltmarsh cordgrass, saltwort, glasswort, salt grass, seaside oxeye daisy, Carolina sea lavender, marsh fimbry, shoreline seapurslane, marsh elder, and saltgrass.

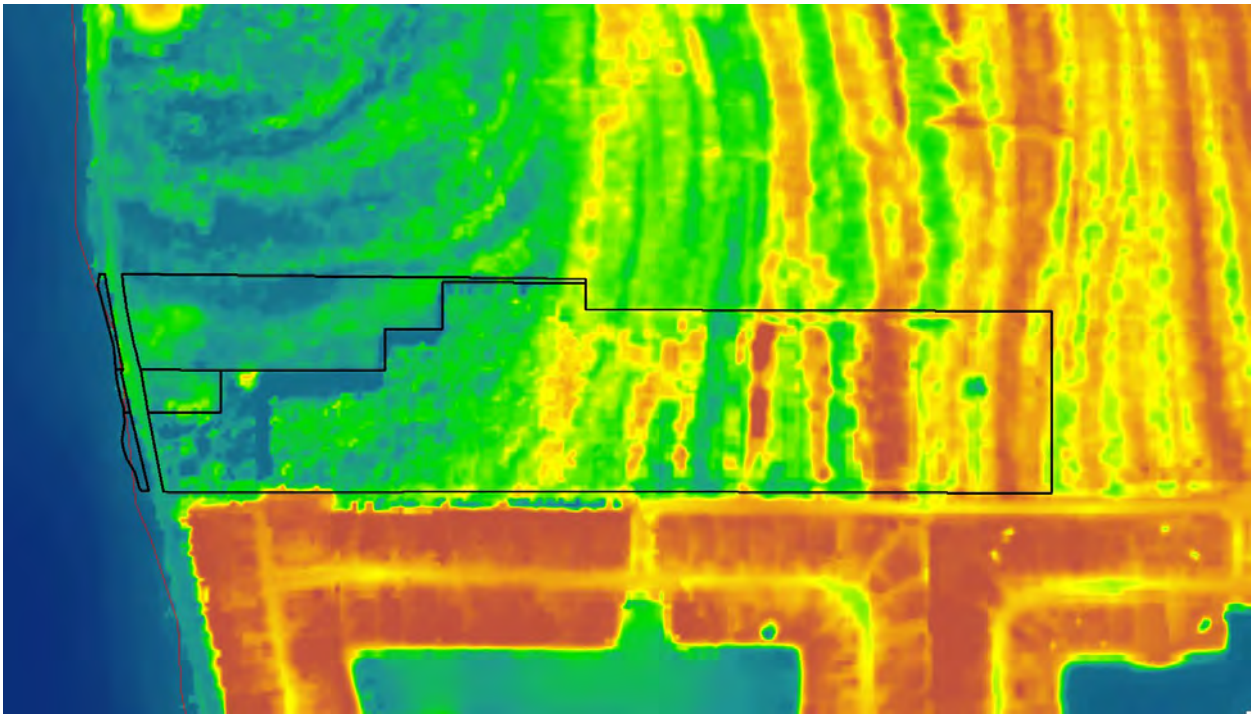
There were no regionally rare natural community types (e.g., scrub, scrubby flatwoods, maritime hammock) identified on the property from the CLC map. However, a large proportion of the property was historically maritime forest which is rare (imperiled) in Indian River County. There appears to be a small remnant (1.8-acres) of maritime forest in the far eastern portion of the parcel.

Figure 4 shows the under-represented natural communities mapped by FNAI for the Florida Forever statewide environmental lands acquisition program that occur on and near the property. No portions of the property contain under-represented natural communities (scale is Priority 1 through 4 with 1 being the highest priority; 0=no rank).

2.2 SOILS

The soil types found on the Jungle Trail Island Manor Property are represented in Figure 5. Captiva (14 acres) and Canaveral (5 acres) were the only two soil types identified on the property. The Captiva series makes up most of the western 0.75 of the site and is currently labelled Shrub and Brushland (old citrus grove) with some small areas labelled as Mixed Hardwood – Coniferous Swamps. The typical vegetation for the Captiva soils series is sand cordgrass, leather leaf fern and Brazilian pepper but on this property, it was historically likely Mixed Hardwood – Coniferous Swamps. The Captiva series consists of very deep, poorly drained, very rapidly permeable soils on broad, low flats near the coast. Internal drainage is impeded by a shallow water table. The water table is within depths of 10 inches for 1 to 2 months during the normal summer rainy season and other periods of high rainfall. In some years the soil is covered by standing water for several days. The Canaveral series makes up the eastern 0.25 of the site and consists of very deep, somewhat poorly to moderately well drained, very rapidly permeable soils on side slopes of dune-like ridges bordering depressions and sloughs along the coast in Peninsular Florida. The native vegetation consists of cabbage palm, scattered saw palmetto, magnolias, bays, and slash pine with an understory of gallberry and pineland threeawn.

The eastern portion of the property has a series of up to seven historic dune and swales that traverse the property north and south (LiDAR figure below). This area was likely historically maritime forest but may have contained some aspects of coastal strand alternating with coastal interdunal swale, given the onsite topography.



LiDAR Figure. The LiDAR generated digital elevation model of the Jungle Trail Island Manor property, showing the successive ridge and swale topography on the eastern portion of the property and the connected excavated ponds and marsh habitat on the western portion of the site.

2.3 HISTORICAL IMAGERY REVIEW

Some of the aerial photographs reviewed for this assessment can be found in the Appendix.

1943 May 05 (UF Map Library)

- Jungle Trail road runs along the west boundary of the property adjacent to the Indian River Lagoon
- Young citrus grove has been planted on approximately 12.6-acres of the property
- Within the grove two linear north south oriented forested strips remain
- Small areas east and west of the citrus grove and west of Jungle Trail (mangroves) are still forested
- The adjacent forested natural lands (to the north and east – currently the Captain Forster Hammock Preserve) are densely canopied with some minor jeep trails. The Jungle Trail Island Manor property was historically likely a continuation of the adjacent natural communities
- South of this property is a large citrus grove

1951 April 4 (UF Map Library)

- The citrus trees are more mature with some mortality
- The natural appearing forested areas are still intact
- The adjacent forested natural lands (to the north and east - Captain Forster Hammock Preserve) have expanded jeep trails/roads and a grid of dirt roads and house lots along the lagoon

1970 December 29 (UF Map Library)

- There appears to be three large linear ditches with adjacent excavated material along the northwestern boundary of the citrus grove
- A1A has been constructed to the east on one of the large dirt roads

No aerial photography was found between 1971 and 1993.

1994 March 17 (Google Earth Pro)

- Borrow pit excavation appears to be starting along the northwestern edge of the citrus grove, fill dirt may have been spread around the two new houses on the adjacent properties to the north (Fischer and Skiscim Properties)
- The offsite forested areas to the north and east remain, currently Captain Forster Hammock Preserve

1999 February 21 (Google Earth Pro)

- Borrow pits have been constructed along the northwestern boundary of the citrus grove, water is visible, and fill may have been spread on the adjacent house property to the north (Skiscim property)
- The structure on the Fischer property is gone
- Houses are being built in the former citrus grove offsite to the southeast

2005 November 30 (Google Earth Pro)

- The citrus grove has become fallow with recruitment of various tree species including palms
- The citrus grove to the south has been converted to houses and retention ponds

2010 January 3 (Google Earth Pro)

- The entire fallow citrus grove onsite has been cleared and mowed; all woody species have been removed
- Portions of the linear north south forested areas in the former citrus grove have been removed and the tree canopy thinned
- The forested area west of the former citrus grove and south of the existing house (Skiscim property) has been thinned and there is a 78m long east-west ditch apparent that runs from the series of borrow pits to the Jungle Trail road
- The forested area in the eastern portion of the site appears relatively undisturbed (as well as, in the 2017 aerial)

2024 (Google Earth Pro and Pictometry)

- The north south linear forested areas in the mowed area (former citrus grove) have been thinned and cleared of about half the trees (live oaks and cabbage palms remain)
- Vegetation in and around the borrow pits has been cleared and the pits may have been deepened, some new fill visible on the Fischer property, the "pits" form a continuous zig-zag channel that totals more than 330m in length and some segments are up to 12m wide
- The forested area west of the former citrus grove has been mostly cleared, some ditches and a woods road along the southern boundary are visible
- The forested area on the eastern boundary has been cleared of some large trees and bare ground is visible (live oaks and cabbage palms remain)
- In the mowed areas (former citrus grove) there is a band of exposed soils/ground near the east end, possibly a drier soil or remnant dune
- In the mowed area some wetter areas are visible, one is west of the band of exposed soil

2.4 OFFSITE CONTINUITY OF NATURAL COMMUNITIES

The small (1.8-acres) forest in the eastern portion is contiguous with the maritime hammock and forested wetland natural communities of Captain Forster Hammock Preserve Conservation Area. The wetland community in the western portion is connected to the mangrove swamp and waters of the Indian River Lagoon via a culvert under Jungle Trail road.

3.0 RARE SPECIES

Table 2 includes a list of the animal species and Table 3 includes the plant species that have the potential to occur onsite that are considered endangered, threatened, or rare as listed by the U.S. Fish and Wildlife Service (FWS), Florida Fish and Wildlife Conservation Commission (FWC), Florida Natural Areas Inventory (FNAI) and the Florida Department of Agriculture. A search using the FNAI Biodiversity Matrix Map Server, and the FWS Information, Planning, and Consultation System (IPaC) Resource List was performed for listed species that may potentially occur within the Project Site. These lists were reviewed and only the species that were potentially likely to occur within the habitats available onsite were included. Additionally, species that are tracked by FNAI

or state listed that occur within Indian River that were not included in the Biodiversity Matrix search, but potential habitat occurs onsite, were included in Tables 2 and 3. The majority of the potential rare animals and plants listed for this property are often associated with mangrove wetland or forested coastal upland communities.

Figure 6 shows The Florida Fish and Wildlife Conservation Commission's Fish and Wildlife Research Institute Terrestrial Resources Geographic Information System web mapping results for species observations near the assessment property. Note these observations are a collection of species documented in the vicinity by various means and are a very incomplete representation of what may occur in the area or that may utilize this property. The resources selected for documented occurrences in the area included Black Bear Calls, Black Bear Telemetry, Eagle Nesting, Panther Mortality, Panther Telemetry, Scrub Jay, Wading Bird Rookeries, and opportunistic Wildlife Observations. There are no documented wildlife sightings on the Jungle Trail Island Manor property (Figure 6).

Figure 7 shows the Critical Lands and Waters Identification Project (CLIP version 4.0) Biodiversity Resource Priorities model, which combines several conservation priorities models including the Strategic Habitat Conservation Areas for Florida Forever, Vertebrate Richness, Potential Rare Species Habitat, and Priority Natural Communities Core Data layers. The property is mapped as Priority 4 (Priority 1 has the highest conservation priority on a scale from 1 to 5) (Figure 7).

Table 2. The animal species listed endangered, threatened, or tracked by FNAI that have the potential to occur on the Jungle Trail Island Manor property.

Species Name	Common Name	Global Rank	State Rank	Federal Status	State Listing
Bird					
Mycteria americana	wood stork	G4	S2	T, PDL	FT
Setophaga discolor paludicola	Florida prairie warbler	G5T3	S3	N	N
Setophaga kirtlandii	Kirtland's Warbler	G3	S1		N
Fish					
Ctenogobius stigmaturus	Spottail Goby	G2	S2	N	N
Rivulus marmoratus	Mangrove Rivulus	G4G5	S3	SC	N
Reptile					
Drymarchon couperi	eastern indigo snake	G3	S2?	T	FT
Gopherus polyphemus	gopher tortoise	G3	S3	N	ST

Table 3. The plant species listed endangered, threatened, or tracked by FNAI that have the potential to occur on the Jungle Trail Island Manor property.

Species Name	Common Name	Global Rank	State Rank	Federal Status	State Listing
Glandularia maritima	coastal vervain	G3	S3	N	E
Harrisia simpsonii (fragrans)	Simpson's prickly apple	G2	S2	N	N
Lantana depressa var. floridana	Atlantic Coast Florida lantana	G2T1T2	S1S2	N	E
Myrcianthes fragrans	Simpson's stopper	G4	S4	N	T

4.0 WETLANDS

Approximately 11 percent of the site is covered in wetlands according to the CLC map. The parcel is within the Indian River Lagoon watershed.

4.1 AEREAL EXTENT AND CONNECTIVITY

From the CLC map only the mixed hardwood-coniferous swamp natural community was identified on the property (Table 1).

Figure 8 shows the wetlands, waterbodies, and flood zones located on the property from the National Wetlands Inventory (NWI) and Federal Emergency Management Agency (FEMA) maps. The NWI map identified 3.3 acres of wetlands, 17 percent of the site, and only freshwater forested/shrub wetland was documented. The excavated ponds, ditches and the Estuarine and Marine wetland polygon west of Jungle Trail were not depicted on the NWI or CLC maps.

The onsite wetlands appear to be hydrologically connected to the Indian River Lagoon via a culvert under Jungle Trail that is connected to a dich that extends to the excavated ponds in the northwest corner of the site.

4.2 ALTERATIONS

There is evidence of vegetation clearing, and ditches and artificial impoundments have been excavated within and adjoining the onsite wetland communities.

Invasive exotic plant infestations, particularly Brazilian pepper, could be high. There were several other invasive exotic plant species observed along the edge of the wetland communities that border Jungle Trail and included Australian pine, beach naupaka, West Indian dropseed, Guinea grass, Senegal date palm, and queen palm.

5.0 WATER RESOURCES

5.1 AQUIFER RECHARGE

Figure 9 shows the priority ranking for aquifer recharge on the project site. This is a broad measure focusing on the recharge of springs, sinks, aquifers, natural systems, and water supply. Areas of potential recharge to the Floridan and surficial aquifers were determined from soil hydraulic conductivity, proximity to karst features, depth to water, and overburden (Florida Forever Conservation Needs Assessment, Tech Report 2023). No portion of the site was identified as a priority for aquifer recharge (ranks 1 through 6 with Priority 1 being the highest priority; 0=no rank) (Figure 9).

5.2 WATER QUALITY

The wetlands onsite have the potential to aid in maintaining water quality and in situ water purification of stormwater entering the system from the uplands. Onsite water quality could potentially be improved by assuring that the essentially impounded wetland is allowed to regularly flush with the tides and hydrological conditions allowing for the continuation of natural biological and chemical processes.

5.3 WATER ATTENUATION

The wetland communities can help to store water and reduce the speed of water as it flows over the landscape.

6.0 CORRIDORS AND GREENWAYS

The eastern portion of the northern boundary and the east boundary of the Jungle Trail Island Manor Property shares an approximately 128m border with the Captain Forster Hammock Preserve Conservation Area (Figure 10). The Captain Forster property is part of the Archie Carr Sea Turtle Refuge Florida Forever BOT Project. Approximately 60m of the western boundary lies along the Indian River Lagoon Blueway Corridor. The Indian River Land Trust Pine Island property is 350m southwest from the site.

Figure 11 shows the CLIP landscape priority ranking for the property. This model combines priorities from the Ecological Greenways and Landscape Integrity Core Data layers. No portion of this property was ranked a priority.

7.0 RESTORATION, LAND MANAGEMENT, HAZARDOUS MATERIALS, AND RECREATION/EDUCATION OPPORTUNITIES

7.1 RESTORATION POTENTIAL

Possible restoration of the onsite natural communities could include planting of maritime hammock vegetation in the uplands, stormwater wetland creation/enhancement, salt marsh restoration, and invasive exotic plant species control. The alterations to the onsite hydrology would need to be more thoroughly assessed to determine the type and amount of restoration that may be beneficial and feasible.

7.2 LAND MANAGEMENT POTENTIAL

This property could be a significant addition to Captain Forster Hammock Preserve Conservation Area that was purchased in the mid-1990s by Indian River County with cost-share funds from the State Conservation and Recreation Lands Program.

7.3 HAZARDOUS MATERIALS

There are no hazardous waste sites reported on the property from two online sources provided by the Florida Department Environmental Protection Division of Waste Management.
Map Direct: https://ca.dep.state.fl.us/mapdirect/
Contamination Locator Map https://ca.dep.state.fl.us/mapdirect/?webmap=bdfa237157c7426a8f552e40a741685e
DEP cleanup sites https://www.arcgis.com/apps/mapviewer/index.html?webmap=316f774db3f7420faf54008608faff64

7.4 RECREATION AND EDUCATION OPPORTUNITIES

The process of establishing recreational opportunities will require inventorying the area to determine appropriate locations for activities, collaborating with stakeholders, determining the desired objectives that recreation could provide, and identifying the financial costs and benefits of

providing the different types of opportunities. Some examples of potential recreation at this site include boating, bank fishing, wildlife viewing, and hiking. The historic Jungle Trail runs along the west boundary. There is the potential for replanting native vegetation and possibly even creating a native arboretum on the parcel. Educational kiosks describing the estuarine wetlands and how they relate to water quality within the Indian River Lagoon could be installed. Similarly, educational resources that describe the value of the last remaining maritime hammocks to migrating Neotropical birds could be installed and help to influence the management of the property.

8.0 OTHER CONSIDERATIONS

The two private parcels northwest of this property that are contiguous with Captain Forster Hammock Preserve have also been nominated for acquisition and these parcels are essentially the last opportunity to add to the Captain Forster Hammock Preserve Conservation Area.

9.0 SUMMARY

The Jungle Trail Island Manor Property is a 19.4-acre parcel that is contiguous with one of the last large remaining mature maritime hammocks in the county. It contains a mix of cleared citrus grove land with shrub marsh, mangrove swamp and salt marsh estuarine wetlands.

1.0 Executive Summary

The **Oak Hammock Parcel**:

- is one parcel along Jungle Trail in Indian River County, Florida.
- consist of 19.60 acres of vacant land.
- was historically improved citrus grove but has been subsequently cleared and graded.
- is currently proposed for residential land development improvements.
- contains mostly poorly drained sandy soils.
- is at an elevation of approximately 5 ft.
- is in coastal flood plain AE-6
- is directly adjacent to Waters of the United States
- still supports some native live oaks and cabbage palms, as well as mangroves.
- does support the gopher tortoise.
- does contain jurisdictional wetlands, including Waters of the United States.
- improvements to the parcel unless properly planned and permitted may cause adverse environmental impacts to native trees, protected species, and wetlands.
    - old growth oak tree preservation is recommended as best practical.
    - gopher tortoise surveying, permitting, and relocation is recommended.
    - formal wetland delineation flagging, jurisdictional review, and permitting is recommended.

Environmental Impact Report

1.1 Objective

In May of 2023 Environmental Specialists from ***Florida Environmental Consulting Inc***. performed an environmental impact study of the **Oak Hammock Parcel**. The objective of this study was to assess and report on the baseline environmental condition of the subject site as well as to discuss how developing this site may impact the environment.

1.2 Introduction

The subject site is Parcel ID **31392600000010000008.0** and is in section 26 of township 31, range 39 of Indian River County, Florida. More specifically, the parcel is on the East side of Jungle Trail, just North of West Island Club Square. The property sums 19.60 acres of vacant land at 27°44'54.8"N 80°23'50.6"W. This parcel was historically improved as a citrus grove, but was subsequently cleared and graded in 2009. The parcel is currently proposed for residential land development improvements. Please see the maps and other reference materials in the appendix of this report.

1.3 Materials and Methods

The site assessment included preliminary research of the site and surrounding area to determine what type of ecological community to expect as well as what types of individual flora and fauna may be found on site. This preliminary research included; Geographic Information Systems (GIS) Mapping, aerial interpretation, Florida Department of Environmental Protection (FDEP) Environmental Resource Analysis, and assessing the potential for species and habitats listed by the County, Saint Johns River Water Management District (SJRWMD), Florida Natural Areas Inventory (FNAI), Florida Fish and Wildlife Conservation Commission (FWC), and the U.S. Fish and Wildlife Service (FWS).

The site assessment also included traversing and observing communities adjacent to and within the site. During the site assessment community types, vegetation, wildlife, and other pertinent observations were noted.

1.4 Soils

According to the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS) the parcel contains 2 major soil types more specifically described as:

Soil 1, *Canaveral fine sand, 0 to 5 percent slopes*, characterized as somewhat poorly drained sand with a water table typically 18-42 inches below the surface with no typical frequency of ponding or flooding, totaling 5.31 acres.

Soil 18, *Captiva fine sand, frequently ponded, 0 to 1 percent slopes*, characterized as poorly drained sand with a water table typically 0-6 inches below the surface with frequent ponding, totaling 14.29 acres.

As mentioned above, the parcel was historically improved for use as a citrus grove. As such it should be noted that these soils are significantly disturbed. Please see the soils map in the appendix of this report for the general location of these soils.

1.5 Hydrology

This parcel is in hydrologic basin 22, the *Central Indian River Lagoon* basin, and the United States Geological Survey (USGS) Topographic Map in the Appendix shows the area as generally flat. However, the hydrology has been significantly disturbed by the historic citrus grove and current land management practices. Stormwater runoff sheet flows generally west and accumulates in onsite swales and ponds before discharging via culverts under Jungle Trail into the Indian River lagoon. Using the North American Vertical Datum of 1983 (NAD83) the natural ground grade is at an elevation of approximately 5 feet and according to the Flood Hazard Map in the Appendix, the majority of the property is in Coastal Floodplain AE-6.

The adjacent Indian River Lagoon is considered Estuarine Waters of the United States.

1.6 Flora

As noted in the introduction the parcel totals approximately 19.60 acres of formerly improved citrus grove that has been cleared and graded. As such the published Land Use Land Cover maps don't necessarily reflect the most accurate classifications. The 15.09-acre majority of the site is considered disturbed *Shrub and Brushland* (1500), but since being cleared of old citrus trees and exotic invasive Brazilian pepper and maintained, could also be considered 1810, *Mowed Grass*. The remainder of the property included 2.53 acres of *Upland Hardwoods* (1110) along the eastern property line, 1.18 acres of *Mixed Scrub-Shrub Wetlands* (2112) along the east side of Jungle Trail, 0.12 acres of *Mangrove Wetlands* (5250) along the west side of Jungle Trail along the Indian River Lagoon, 0.68 acres of *Artificial ponds* (3210). Please see the Aerial LULC Map and Site Photos in the Appendix.

As mentioned above the majority of the site was cleared and graded in 2009 and has since been routinely maintained and largely supports miscellaneous grasses and forbs. However, some remnant forested areas still support live oaks (*Quercus virginiana*), cabbage palms (*Sabal palmetto*), and red mangroves (*Rhizophora mangle*), as well as Brazilian pepper (*Schinus terebinthifolius*) and strangler figs (*Ficus aurea*). The understory species observed

included saw palmetto (*Serenoa repens*), muscadine grape (*Vitis rotundifolia*), and other miscellaneous grasses and forbs including many facultative-wet species in lower lying areas.

With the exception of Mangroves, no species of flora was observed on site listed by the County, Florida Natural Areas Inventory, Florida Fish and Wildlife Conservation Commission, or U.S. Fish and Wildlife Service, as Endangered, Threatened, or a Species of Special Concern.

Please see the Land Use Land Cover Map and Site Photos in the appendix of this report.

1.7 Fauna

The species of fauna directly observed were rabbits (*Sylvilagus spp.*), blue land crabs (*Cardisoma guanhumi*), wood ducks (*Aix sponsa*), blue jays (*Cyanocitta cristata*), warblers (*Setophaga spp.*), mourning doves (*Zenaida macroura*), black vultures (*Coragyps atratus*), green anoles (*Anolis carolinensis*), brown anoles (*Anolis sagrei*), ants (*Formicidae spp*.), spiders (*Arachnida spp.*), dragon flies (*Odonata spp.*), and bees (*Apidae spp.*).

Additionally, there were numerous gopher tortoise (*Gopherus Polyphemus*) burrows observed on the property. The gopher tortoise is a species listed by the FWC and is protected along with their burrows.

With the exception of the gopher tortoise, no other species of fauna listed by the County, Florida Natural Areas Inventory, Florida Fish and Wildlife Conservation Commission, or U.S. Fish and Wildlife Service, as Endangered, Threatened, or a Species of Special Concern, was observed or suspected on site.

Please see the Site Photos in the Appendix of this report.

1.8 Wetlands

Based on topography and aerial interpolation in conjunction with the additional publications, and given the proximity to known water bodies, wetlands were suspected, and subsequently confirmed in the field. As such, it was determined via the presence of hydric soils, hydrophytic vegetation, and hydrologic indicators, that the site does support freshwater forested wetlands, mangrove wetlands, and other surface waters.

Based on the presence of wetlands, as well as being immediately adjacent to and culverted to the Indian River Lagoon, these wetlands and surface waters also qualify as Waters of the United States.

Please see the National Wetland Inventory Map and Site Photos in the Appendix of this report.

1.9 Summary and Discussion

In summary, the **Oak Hammock Property** is one parcel along Jungle Trail in Indian River County, Florida, consisting of 19.60 acres of vacant land. The parcel was historically improved citrus grove but has been subsequently cleared and graded, and is currently proposed for residential land development improvements. The parcel contains mostly poorly drained disturbed sandy soils at an elevation of approximately 5 feet, is in coastal flood plain AE-6, and is adjacent to the Indian River Lagoon Waters of the United States. The parcel also supports some remnant native live oaks and cabbage palms, and does support the protected gopher tortoise. Finally, the parcel also does contain jurisdictional wetlands, as well as Waters of the United States.

For discussion, as stated above the property does contain some live oaks and cabbage palms, some of which are beautiful old growth trees, and though these trees may be cleared with a permit, micro-site-planning should be looked into in an effort to save such protected trees as best practical.

Also, this site does support the gopher tortoise. Any proposed impacts within 25' of a gopher tortoise burrow will require special permitting from the FWC, as well as the relocation of any tortoise found along with associated mitigation fees. If suitable habitat is left undisturbed after site planning, some tortoises may remain or most likely be relocated to an offsite recipient gopher tortoise sanctuary. Gopher tortoises may be surveyed any time, however, gopher tortoise permitting, mitigation, and relocation should be initiated 90 days prior to any site work activity including bush-hogging, clearing, and grading, or other disturbance.

Finally, the site does support wetlands, as such avoidance and minimization of impacts criteria will need to be met and any impacts that are unavoidable during planning and design will require compensatory mitigation. Offsite mitigation credits may be available at the *Basin 22 Mitigation Bank*. A formal wetland delineation flagging and jurisdictional review will be required for all wetlands during the permitting process.

1.10 Conclusion and Recommendations

In conclusion, land development improvements to the **Oak Hammock Parcel**, unless properly planned and permitted, may cause adverse environmental impacts to native trees, protected species, and wetlands.

As such during the planning and design phase of this potential land development project, canopy tree preservation is recommended as best practical. Additionally, a gopher tortoise survey, permitting, and relocation is recommended 90 days prior to any additional clearing, grading, or construction commencement. Finally, it is recommended that a formal wetland delineation flagging and jurisdictional review be conducted to confirm wetland extents during permitting.

Please contact Florida Environmental Consulting, Inc. with any questions or comments regarding this report or for any additional specific consulting.

1.11 Qualifications of Individual Preparing Report

Florida Environmental Consulting is a Florida registered environmental consulting firm, the person who prepared this report is the president of the company, and his signature and seal on the cover of this document demonstrate that he is in responsible charge of the information provided. He is a Certified Environmental Consultant and Environmental Specialist. Additionally, he has a Bachelor of Science in Environmental Science from the University of Florida with a minor in Natural Resource Management, along with 22 years of experience. Finally, he is a member of the National Association of Environmental Professionals, and the Environmental Assessment Association where a code of ethics and personal commitment to quality work is upheld.

BEGINNING AT A STAKE ON THE LINE BETWEEN GOVERNMENT LOTS 10 AND 11, 284.2 FEET NORTH OF THE SOUTH LINE OF SAID SECTION 26; THENCE RUN EAST 196 FEET; THENCE RUN NORTH 145.8; THENCE RUN WEST 196 FEET TO THE WEST LINE OF SAID LOT 11; THENCE RUN SOUTH 145.8 FEET TO THE POINT OF BEGINNING.
(SAID EXCEPTION BEING INCLUDED IN PARCEL B HEREINAFTER DESCRIBED.)

ALSO EXCEPTING FROM SAID PARCEL A THE FOLLOWING DESCRIBED LAND, TO-WIT:

BEGINNING AT A STAKE ON THE EAST EDGE OF THE INDIAN RIVER 284.2 FEET NORTH OF THE SOUTH LINE OF SAID SECTION 26; THENCE RUN EAST 250 FEET TO A STAKE; THENCE RUN SOUTH 100 FEET; THENCE RUN WEST 221.2 FEET TO A STAKE ON THE EAST EDGE OF THE INDIAN RIVER; THENCE RUN NORTH WITH THE EAST EDGE OF THE INDIAN RIVER TO THE POINT OF BEGINNING, IN INDIAN RIVER COUNTY, FLORIDA.

PARCEL B:

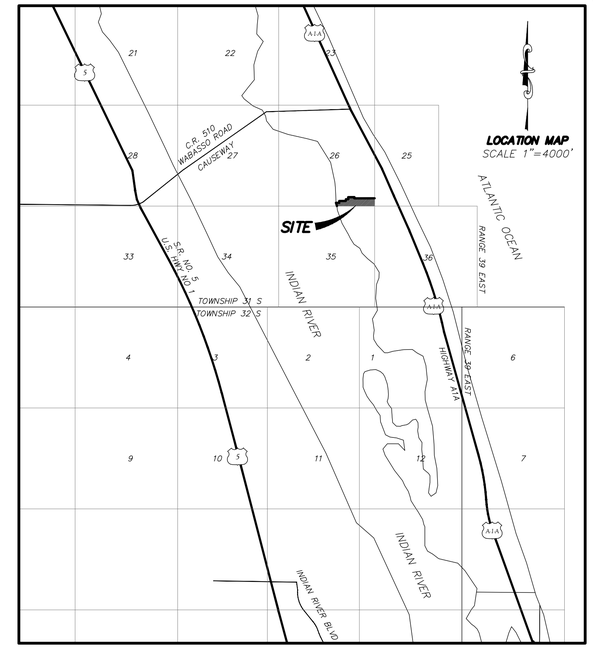
BEGINNING AT A STAKE 284.2 FEET NORTH OF THE SOUTH LINE OF SECTION 26, TOWNSHIP 31 SOUTH, RANGE 39 EAST, AND ON THE LINE BETWEEN GOVERNMENT LOTS 10 AND 11; THENCE RUN EAST 196 FEET TO A STAKE;
THENCE RUN NORTH 210 FEET TO AN IRON PIPE; THENCE RUN WEST 340 FEET TO A STAKE; THENCE RUN SOUTH 110.6 FEET TO A STAKE; THENCE RUN SOUTH 88°30' WEST 135.8 FEET TO A STAKE; THENCE RUN SOUTH 97.2 FEET TO A STAKE IN THE NORTH LINE OF PARCEL A; THENCE RUN EAST 279.8 FEET TO THE POINT OF BEGINNING,
IN INDIAN RIVER COUNTY, FLORIDA.

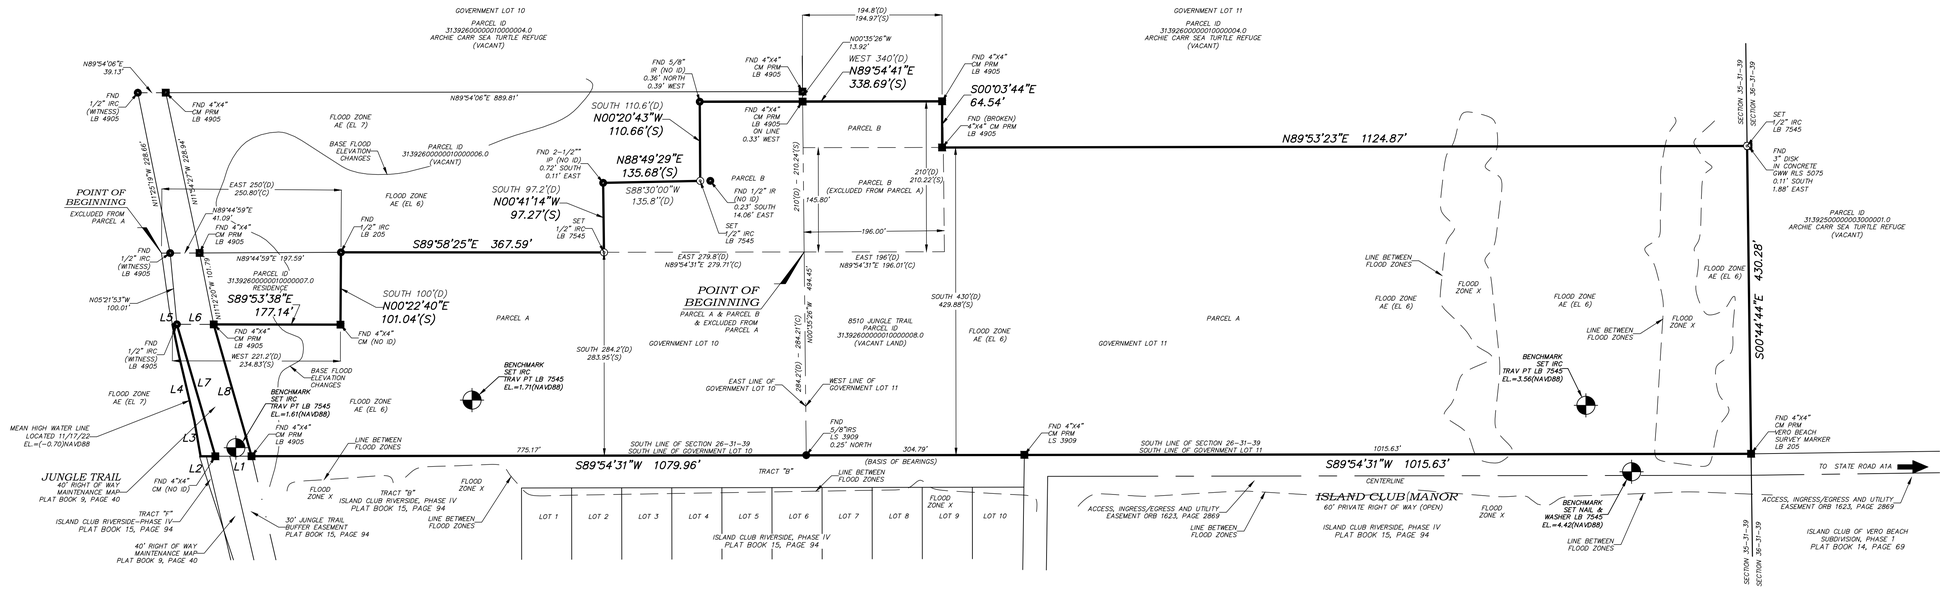
LESS & EXCEPT THAT PARCEL DESCRIBED IN QUIT CLAIM DEEDS RECORDED IN O.R. BOOK 1142, PAGE 1415 AND O.R. BOOK 1142, PAGE 1413, PUBLIC RECORDS OF INDIAN RIVER COUNTY, FLORIDA.

TOGETHER WITH ALL RIGHT, TITLE AND INTEREST OF THE OWNERS OF THE ABOVE DESCRIBED PROPERTY IN AND TO THAT CERTAIN EASEMENT AGREEMENT DATED JUNE 12, 2003 AND RECORDED IN OFFICIAL RECORD BOOK 1623, PAGE 2869, PUBLIC RECORDS OF INDIAN RIVER COUNTY, FLORIDA.

SURVEYORS NOTES:

1. THIS SURVEY DOES NOT DETERMINE OR INDICATE LAND OWNERSHIP.
2. THE SURVEYOR DID NOT RESEARCH OR ABSTRACT THE LAND RECORDS FOR RIGHTS-OF-WAY, EASEMENTS, RESERVATIONS, DEED RESTRICTIONS, ZONING REGULATIONS, SETBACKS, LAND USE PLAN DESIGNATIONS, LIENS, MURPHY ACT RIGHTS-OF-WAY, AREAS OF LOCAL CONCERN, OR OTHER SIMILAR JURISDICTIONAL DETERMINATIONS. TO THE EXTENT THAT THIS TYPE OF INFORMATION IS SHOWN, IT IS SHOWN SOLELY ON THE BASIS OF INFORMATION PROVIDED BY THE CLIENT OR INFORMATION OTHERWISE KNOWN TO THE SURVEYOR AND MAY NOT BE COMPLETE.
3. UNDERGROUND UTILITIES, BUILDING FOUNDATIONS, AND OTHER UNDERGROUND FIXED IMPROVEMENTS WERE NOT LOCATED, UNLESS OTHERWISE INDICATED. TO THE EXTENT THAT THIS TYPE OF INFORMATION IS SHOWN, IT IS SHOWN SOLELY ON THE BASIS OF SURFACE INDICATIONS OBSERVED BY THE SURVEYOR AND MAY NOT BE COMPLETE. ALL UNDERGROUND UTILITIES MUST BE FIELD VERIFIED PRIOR TO EXCAVATION OR CONSTRUCTION.
4. JURISDICTIONAL WETLANDS AND ENDANGERED OR THREATENED SPECIES HABITAT, IF ANY, THAT MAY EXIST ON OR AROUND THE SURVEY SITE WERE NOT DETERMINED OR LOCATED.
5. THE SURVEY DATE IS THE FIELD DATE SHOWN IN THE TITLE BLOCK, NOT THE SIGNATURE DATE.
6. BEARINGS SHOWN HEREON REFER TO STATE PLANE COORDINATES FLORIDA EAST ZONE, NAD83, 2011 ADJUSTMENT AND WERE DERIVED BY ASSIGNING A GRID BEARING OF S89°54'31"W TO THE SOUTH LINE OF GOVERNMENT LOTS 10 AND 11, SECTION 26-31-39.
7. THERE MAY BE AND PROBABLY ARE ADDITIONAL TREES NOT SHOWN, UNDESIRABLE TREES AND TREES UNDER 6" DIAMETER WERE NOT LOCATED.
8. ELEVATIONS SHOWN ARE BASED ON NORTH AMERICAN VERTICAL DATUM OF 1988 REFERENCING NGS BENCHMARK "88-78-A15" PID AF6857, AT AN ELEVATION OF "9.79 FEET"(NAVD88)
9. FLOOD ZONE "X" 0.2% CHANCE OF ANNUAL FLOOD, AREAS OF 1% ANNUAL CHANCE FLOOD WITH AVERAGE DEPTH LESS THAN 1 FOOT OR WITH DRAINAGE AREAS OF LESS THAN 1 SQUARE MILE AND ZONE "AE" (EL 6) AND (EL 7), FLOOD INSURANCE RATE MAP NUMBER 12061C0232J, DATED JANUARY 26, 2023.





NOTE:
THIS TIDAL WATER SURVEY COMPLIES WITH CHAPTER 177, PART II, FLORIDA STATUTES.

NOTE:
MEAN HIGH WATER ELEVATION AS SHOWN HEREON WAS ESTABLISHED BY EXTENDING THE ELEVATION SHOWN AT TIDE INTERPOLATION POINT NO. 2201.

MEMORANDUM

DATE: 12/16/2024

RE: Island Club Manor Vero Beach Project
Parcel ID: 31392600000010000008.0

On December 16th, Drew Gatewood, an ISA Certified Arborist with ARE performed a 100% survey on the above referenced parcel's tree population. Pedestrian transects were completed and individual observations were made on every tree meeting the County's tree protection thresholds. The site is currently pasture land with some vegetation. ARE assessed the trees on site of which some are in poor or declining condition. The most common defect found in the trees on site were heavy signs of basal rot and rotting branches. Also noted in some of the trees were multiple areas of deep penetrating trunk rot, likely also having heartwood rot (Please see excel sheet for breakdowns). These trees are recommended for removal as they likely will not survive the construction process and will become liabilities to the completed project if left standing.

Tree Score Breakdown:

5.) Perfect structure for the species of tree, no observable abnormalities or deformities
4.) Minor imperfections, but nothing that results in any major structural flaw
3.) Major structural flaws or imperfections that likely will lead to failure during or post construction
2.) Heavily diseased or structurally impaired tree. Failure likely at any time, will cause serious damage to proposed project
1.) Tree is in failure and likely will collapse or be deceased within the next few months

Drew Gatewood, MS, PWS, CWB, ISA Certified Arborist

Community

Demographic Profile of Surrounding Area (1-Mile Radius)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2023 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. Census boundaries and demographic data for U.S. Territories are based on the "2020 Island Areas Demographic Profiles" from the U.S. Census Bureau. EPA's spatial processing methodology considers the overlap between the selected radii and ACS census block groups in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary <https://epa.gov/help/reports/dfr-data-dictionary#demographic>.

General Statistics (ACS (American Community Survey))	
Total Persons	1,978
Population Density	957/sq.mi.
Housing Units in Area	1,358
Percent People of Color	5%
Households in Area	991
Households on Public Assistance	3
Persons With Low Income	341

Age Breakdown (ACS (American Community Survey)) - Persons (%)	
Children 5 years and younger	5 (0%)
Minors 17 years and younger	84 (4%)
Adults 18 years and older	1,893 (96%)
Seniors 65 years and older	1,338 (68%)

Race Breakdown (ACS (American Community Survey)) - Persons (%)	
White	1,883 (95%)
African-American	12 (1%)

General Statistics (ACS (American Community Survey))	
Percent With Low Income	17%
Geography	
Radius of Selected Area	1 mi.
Center Latitude	27.74893
Center Longitude	-80.40072
Total Area	3.14 sq.mi.
Land Area	66%
Water Area	34%

Income Breakdown (ACS (American Community Survey)) - Households (%)	
Less than $15,000	11 (1.11%)
$15,000 - $25,000	68 (6.85%)
$25,000 - $50,000	146 (14.72%)
$50,000 - $75,000	125 (12.6%)
Greater than $75,000	642 (64.72%)

Community

Demographic Profile of Surrounding Area (1-Mile Radius)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2023 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. Census boundaries and demographic data for U.S. Territories are based on the "2020 Island Areas Demographic Profiles" from the U.S. Census Bureau. EPA's spatial processing methodology considers the overlap between the selected radii and ACS census block groups in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary <https://epa.gov/help/reports/dfr-data-dictionary#demographic>.

1.0 INTRODUCTION

Kimley-Horn and Associates, Inc. (KHA) was retained by Indian River County, Florida to complete a site assessment for the Jones Pier property (the "Site") located in Vero Beach, Indian River County, Florida. Environmental due diligence activities completed prior to the County's acquisition of the property indicated the presence of limited soil and ground water impacts. The identified contamination is the result of the historical use of the subject property, prior to Indian River County's ownership. The County intends to address the impacts in accordance with the provisions of Florida's Contaminated Site Cleanup Criteria, Chapter 62-780, Florida Administrative Code (FAC).

This Site Assessment Report (SAR) has been prepared to meet the requirements of Chapter 62-780.450, FAC. The extent of the soil and ground water impacts on the Site have been defined pursuant to Chapter 62-780, FAC, and are summarized herein. The results of the site assessment activities, discussed herein, suggest that no further action is warranted for the Site. As such, this Site Assessment Report includes a No Further Action Proposal.

2.0 SITE DESCRIPTION

The following is a summary of the location, ownership, history, and physical description of the subject Site.

2.1 Location and Physical Description

The Jones Pier Site is an approximately ±16.5-acre tract of land located northeast of the intersection of Jungle Trail and Morningside Drive in Indian River County, Florida (**Figure 1**). The Site consists of two contiguous parcels (31393600000008000004.0 and 31393600000008000005.0) totaling approximately 16.5 acres (**Appendix A**).

The Site is bordered by residential development to the north, south, and east (**Figure 2**). The Indian River is present west of the Site. Drainage ditches are present along the northern and southern property boundaries. Mr. Richard Jones, the former owner and current resident of the Site, indicated these ditches outfall under Jungle Trail via culverts and discharge to the Indian River to the west.

The east and central portions of the Site are leased for agricultural purposes; specifically, a tree farm (**Figure 2**). The tree farm is maintained and used for the cultivation of foxtail (*Wodyetia bifurcata*), cocoanut (*Cocos nucifera*) and date palms (*Phoenix* sp.). The land surface within the tree farm is relatively flat and contains approximately 12 east-west upland-cut furrows. An abandoned farm shed is located in the northeastern portion of the property. A topographic depression is located in the central portion of the Site within the tree farm. Three wells were observed in proximity to the onsite tree farm. Mr. Jones indicated the three wells serving the tree farm are approximately 12 feet deep. The wells are capped with valves and do not appear to be open to the surface.

The western portion of the Site is occupied by the Jones family homestead (**Figure 2**). It consists of a historic house, which was built in approximately 1921. The house is currently occupied by Mr. Jones. The homestead also includes a utility shed, a cottage, a garage, and a

storage building. Water is provided to the historic house by a well; a second well provides water to the cottage. According to Mr. Jones, the wells serving the house and cottage are approximately 600 feet deep. The wells are capped with valves and do not appear to be open to the surface.

2.3 Ownership

The subject Site is owned by Indian River County, which acquired the property from Richard and Mary Jones on September 19, 2008. A copy of the corresponding warranty deed is included in **Appendix A**. The Site was acquired by the County with the understanding that the land would be used for conservation purposes and would not be developed. As such, a deed restriction shall be applied to the two parcels limiting their use. As of this writing, the deed restrictions have not been finalized.

2.4 Site Topography and Physical Setting

The Site is located at approximately 27° 44' 5.56" North latitude and 80° 23' 25.22" West longitude as referenced on the *Vero Beach, FL* United States Geological Survey (USGS) 7.5-minute topographic quadrangle maps (**Figure 3**). The average elevation across the Site is approximately 5 feet relative NAVD 1988. The land surface in the vicinity of the homestead is relatively flat. Several east-west earthen furrows are present on the tree farm portion of the Site. Furthermore, a topographic depression is present in the central portion of the Site. This area is heavily vegetated.

2.5 Hydrogeologic Setting

Two principal aquifer systems underlie the Site; the surficial aquifer and the Floridan aquifer. The Floridan aquifer system is the principal source of potable water for much of the County, whereas the surficial aquifer is used for irrigation and non-potable water. The surficial aquifer system consists of a 100 to 150-foot-thick section of unconsolidated clastic deposits termed the "clastic zone" that overlies a 0 to 60-foot-thick section of mostly indurated carbonate rock termed the "shallow rock zone." The Floridan aquifer system consists of about 2,800 feet of carbonate rocks, subdivided on the basis of permeability, into the Upper Floridan aquifer (about 350-650 feet thick), the middle semiconfining unit (about 20-120 feet thick), and the Lower

Floridan aquifer (roughly 2,000 feet thick). The surficial and Floridan aquifer systems are separated by a 100 to 200-foot-thick low permeability rock unit known as the intermediate confining unit.

Transmissivities of the surficial aquifer system range from 1,500 to 11,000 ft^2 /d (feet squared per day). The hydrology of the Floridan aquifer system is complex. Considerable variation in yield and water quality may be found in nearby wells of equal depth. The permeability of the Upper Floridan aquifer is generally higher than that of the Lower Floridan aquifer. Transmissivities of the Upper Floridan aquifer, estimated from computer model simulations, range from about 65,000 ft^2/d to 200,000 ft^2/d.

2.6 Site History

According to Mr. Jones, his family had owned the Site since the late 1890s. The homestead was constructed on the site in 1921 and the cottage was built in 1947. The subject Site and surrounding properties have historically been used for citrus cultivation. Residential development of the property south of the Site began in 1984. Similar development of the property to the north began in 1998. The on-site citrus groves were damaged by hurricanes in 2003, after which, the land was replanted with palm trees and began its existence as a tree farm.

3.0 PREVIOUS REPORTS

KHA was retained by various entities to complete environmental due diligence activities in association with the Site. These activities include the completion of a Phase I Environmental Site Assessment (ESA), a Limited Phase II ESA, and an Expanded Phase II ESA. The work described in this section was performed under attorney/client privilege. As such, KHA is unable to provide copies of the corresponding reports in their entirety. However, certain components of the referenced reports are being provided as appendices to this SAR.

The Limited and Expanded Phase II ESAs were performed for the express purpose of investigating the recognized environmental conditions (REC) identified during the Phase I ESA. As such, the data quality objects (DQO) of the Phase II ESAs are significantly different than that of the subsequent site assessment sampling conducted under the purview of Chapter 62-780, FAC. Nevertheless, FDEP Standard Operating Procedures (SOP) were followed during the collection of the soil and ground water samples. KHA presents the findings of the Limited and Expanded Phase II ESAs with the understanding that the data from these assessments does not meet the DQO specified in Chapter 62-780, FAC. As such, this data is provided for screening and evaluation purposes only and should not be considered for site assessment purposes.

3.1 Phase I Environmental Site Assessment – April 2008

In April 2008, KHA was retained by Floridaffinity, Inc. to complete a Phase I ESA for the subject Site. This ESA was conducted in accordance with the principles, methods, and procedures outlined in the American Society for Testing and Materials (ASTM) Standard Method E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The purpose of this investigation was to identify the presence or likely presence of hazardous substances or regulated products on the Site under conditions indicating an existing release, past release, or a material threat of a release that could impact the property. These potential environmental liabilities are defined as recognized environmental conditions in ASTM E 1527-05.

The April 2008, Phase I ESA identified evidence of the following RECs:

- Current Use of the Subject Site – The prevailing use of the Site was considered a REC due to the common and legal application of fertilizers, herbicides, and pesticides in association with the tree farm.

- Past Use of the Subject Site – The historical use of the Site for citrus cultivation was considered a REC due to the common and legal application of fertilizers, herbicides, and pesticides.

- On-Site Utility Shed and Storage Building – The utility shed and storage building identified on the property were reportedly used for the storage and possible mixing of agrochemicals. No evidence was identified to suggest that the utility shed or storage building were used for maintenance-related activities. The utility shed and storage building were considered RECs due to the storage of mixing of agrochemicals.

- Presence of Solid Waste – Solid waste was observed at the land surface in and around the topographic depression in the central portion of the Site. No evidence of soil staining or stressed vegetation was observed in association with the solid waste. Furthermore, no evidence was identified to suggest that solid waste is present below the land surface. Nevertheless, the present of solid waste in the central portion of the Site was considered a REC.

- Past Use of the Adjacent Properties – Historical documents suggest that the surrounding properties were used for citrus cultivation from at least the 1920s through the early 1980s. The historical use of the surrounding properties was considered a REC due to the common and legal use of herbicides, pesticides, and fertilizers in association with citrus cultivation.

Due to the presence of the aforementioned RECs, KHA recommended the completion of a limited Phase II ESA. The purpose of the Phase II ESA was to further investigation the

identified RECs and determine whether they may have contributed to the degradation of the soil or ground water quality at the Site.

3.2 Limited Phase II Environmental Site Assessment – June 2008

In June 2008, Floridaffinity, Inc. retained KHA to complete a Limited Phase II ESA for the subject Site based on the findings of the April 2008, Phase I ESA. The Limited Phase II ESA included the collection of 15 soil samples and 9 ground water samples from strategic locations across the Site to further investigate the identified RECs. The soil and ground water sampling was performed using direct-push technology (DPT). Temporary monitoring wells were installed on the Site to facilitate the collection of representative ground water samples.

A summary of the identified RECs and their corresponding contaminants of concern is provided on **Table 1**. Tabulated summaries of the soil and ground water data and figures depicting the soil boring and monitoring well locations from the Limited Phase II ESA report are included in **Appendix B**.

3.2.1 Limited Phase II ESA Soil Sampling

A total of 21 soil borings were advanced across the Site using direct-push technology (DPT) to facilitate the collection of 15 representative soil samples relative to the identified RECs. SB-1 and SB-2 were collected as composite samples from two distinct horizons at eight locations with respect to the historic on-site grove (**Appendix B**). Composite soil sample SB-1 consisted of (8) aliquots collected from 0 to 6-inches below land surface (bls). Similarly, composite soil sample SB-2 consisted of (8) aliquots collected from 6-inches to 2-feet bls. The distinct soil samples from each horizon were composited in the field prior to analysis. Two (2) samples (SB-3 and SB-4) were collected at the utility shed. Four (4) samples (SB5 through SB-8) were collected at the storage building. Four (4) samples (SB-9 through SB-12) were collected at the farm shed. Three (3) samples (SB-13 through SB-15) were collected in the solid waste area. Soil samples SB-3 through SB-15 were screened with an organic vapor analyzer (OVA) prior to sample collection. None of these soil samples registered an OVA response. Therefore, the near surface (0 to 6") soil samples were retained for laboratory analysis.

3.2.2 Limited Phase II ESA Ground Water Sampling

Nine (9) temporary monitoring wells were installed on the Site using DPT to facilitate the collection of representative ground water samples from the surficial aquifer. The temporary monitoring wells were installed using a Geoprobe direct-push rig and were constructed of 1-inch diameter PVC casing with a 10-foot long, pre-packed Geoprobe well screen. Prior to sampling, each temporary monitoring well was purged to facilitate collection of representative ground water samples. Field parameters (pH, temperature, specific conductivity, dissolved oxygen, and turbidity) were measured and recorded during the purging of the monitoring wells to monitoring wells to ensure the collection of representative samples from the water-bearing formation.

3.2.3 Limited Phase II ESA Soil Results

A summary of the Limited Phase II ESA soil data is provided in **Appendix B**. The following is a concise summary of the soil quality data from the Site:

- Detectable concentrations of pesticides were identified in select soil samples above the laboratory method detection limit (MDL). However, none of the results exceeded the corresponding default soil cleanup target levels (SCTL) for residential or commercial direct-contact exposure as defined in Chapter 62-777, FAC. Dieldrin was identified about the default ground water leachability SCTL in two soil samples, SB-4 and SB-8. Dieldrin was also identified in SB-1 above the marine surface water leachability SCTL (MSWLSCTL). 4, 4-DDE was identified in SB-7 and SB-8 above the (MSWLSCTL). Soil samples SB-4, SB-7, SB-8 and SB-13 contained detectable concentrations of chlordane above the MSWLSCTL.

- With one exception, detectable concentrations of metals were not identified above the applicable SCTLs. Total chromium was identified in SB-9 above the MSWLSCTL.

- Detectable concentrations of VOCs, PAHs, TRPH, BTEX/MTBE, herbicides, sulfate, and chloride were not identified above the applicable SCTLs in the soil samples collected from the Site.

3.2.4 Limited Phase II ESA Ground Water Results

A summary of the Limited Phase II ESA ground water quality data is provided in **Appendix B**. The following is a concise summary of the ground water quality data collected from the Site.

- Ground water sample GP-7 contained elevated concentrations of total iron and sodium above the applicable marine surface water cleanup target level (MSWCTL) and ground water cleanup target levels (GCTL), respectively as defined in Chapter 62-777, FAC. No other metals were identified in the ground water above the applicable GCTLs.

- Ground water sample GP-7 contained elevated concentrations of ammonia, phenols, and chloride above the applicable GCTL.

- Pesticides, herbicides, total recoverable petroleum hydrocarbons, BTEX/MTBE, and PAHs were not indentified in any of the ground water samples above the applicable GCTLs.

Based on the results of the Limited Phase II ESA, KHA recommended that additional soil and ground water sampling be performed to confirm the identified impacts and delineate their corresponding extents.

3.3 Expanded Phase II Environmental Site Assessment – July 2008

In July 2008, Floridaffinity, Inc. retained KHA to complete an Expanded Phase II ESA for the subject Site. The purpose of the Expanded Phase II ESA was to confirm and further evaluate the identified soil and ground water impacts identified during the Limited Phase II ESA. Specifically, the Expanded Phase II ESA was performed to evaluate the presence of dieldrin identified in the soil and ammonia, iron, and phenols identified in the ground water at the Site. A

total of 12 soil samples and 5 groundwater samples were collected from strategic locations across the Site.

Tabulated summaries of the soil and ground water data and figures depicting the soil boring and monitoring well locations from the Expanded Phase II ESA report are included in **Appendix C**.

3.3.1 Expanded Phase II ESA Soil Sampling

A total of 12 soil borings were advanced across the Site to confirm the soil impacts identified on the Site. Confirmatory soil borings were strategically located in areas where soil impacts were previously identified in the Limited Phase II ESA. The naming convention of the soil borings was chosen to remain the same as the previous investigation for consistency and ease of reference.

Soil sample SB-1 was used to confirm the surficial (0-0.5 foot depth interval) soil quality impacts identified in the historical grove/tree farm area. Therefore, the soil samples were collected from 0 to 6-inches below the land surface (bls). Soil sample SB-1 was an eight-point composite sample made up of aliquots collected from eight locations across the grove/tree farm area. Prior to sampling, the soil recovered from the soil borings was screened using an organic vapor analyzed (OVA) to determine whether organic compounds may be present within the soils. None of these soil samples registered an OVA response.

Since the contaminants of concern were not previously identified in the soil samples collected from SB-2 and SB-3 during the Limited Phase II ESA, no soil samples were collected in the vicinity of the two soil boring during the Expanded Phase II ESA. Soil sample SB-4 was collected east of the utility shed to confirm the dieldrin and total chlordane concentrations identified during the Limited Phase II ESA. The contaminants of concern were not identified in soil samples collected from SB-5 and SB-6 during the Limited Phase II ESA. Thus, no soil samples collected in the vicinity of these two soil boring during the Expanded Phase II ESA. Soil samples SB-7 and SB-8 were collected along the northern and eastern sides of the storage building on the Site. During the Limited Phase II ESA, detectable concentrations of chlordane, 4, 4-DDD, 4, 4-DDE, 4, 4-DDT, and dieldrin were identified in this area. Soil boring SB-13 was

advanced in the vicinity of the soil waste dumping area to confirm the presence of chlordane identified in the soil during the during the Limited Phase II ESA.

3.3.2 Expanded Phase II ESA Ground Water Sampling

Five (5) permanent monitoring wells were installed on the Site to facilitate the collection of representative ground water samples from the surficial aquifer. The monitoring wells were strategically located on the Site to confirm and delineate the ground water impacts previously identified during the Limited Phase II ESA. Monitoring well MW-1 was installed in the area of the Limited Phase II ESA temporary monitoring well GP-7. Monitoring wells MW-2, MW-3, MW-4, and MW-5 were installed approximately 50 feet to the north, south, west, and east of MW-1, respectively.

The permanent monitoring wells were installed using hollow-stem auger (HAS) techniques and were constructed of 2-inch diameter, schedule 40 PVC casing, with 10-feet of 0.010-inch machine-slotted well screen. Each monitoring well was installed to a depth of approximately 12 to 15 feet bls. A 20/30 sand pack was placed in the annular space between the screen and the borehole wall. The sand pack extended approximately two feet above the top of the well screen. The monitoring wells were completed below-grade with a concrete pad and flush-mounted well cover. Prior to sampling, each permanent monitoring well was developed to remove accumulated sediment within the well screen and facilitate hydraulic communication between the sand pack and the water-bearing formation.

Prior to sampling, the monitoring wells were purged to facilitate collection of representative ground water samples. Field parameters (pH, temperature, specific conductivity, dissolved oxygen, and turbidity) were measured and recorded through the monitoring well purging process. Monitoring well purging and sampling was performed using a peristaltic pump. Clean, dedicated sample tubing was used to purge and sample each monitoring well.

3.3.3 Expanded Phase II ESA Soil Results

A summary of the Expanded Phase II ESA soil quality data is provided in **Appendix C**. The following is a concise summary of the data.

Detectable concentrations of organochlorine pesticides were identified in the soil samples collected during the Expanded Phase II ESA. None of the detectable concentrations exceeded the default residential or commercial direct-contact SCTL or the ground water leachability SCTL. However, several of the samples were found to contain pesticide concentrations above the marine surface water leachability (MSWSCTL). Soil samples SB-1 and SB-4 exhibited laboratory-reported dieldrin concentrations of 0.438 micrograms per kilogram (ug/kg) and 0.55 ug/kg respectively, above the MSWSCTL of 0.1 ug/kg. Soil sample SB-7 contained 4, 4'-DDD at a concentration of 19.6 ug/kg, which is above the default MSWSCTL of 10 ug/kg. Soil sample SB-7 also exhibited a laboratory-reported 4, 4-DDT concentration of 78.3 ug/kg, above the default MSWSCTL of 60 ug/kg. Soil samples SB-7 and SB-8 contained chlordane concentrations at 27.3 ug/kg and 14.3 ug/kg respectively, above the default MSWSCTL of 3.0 ug/kg.

In summary, detectable concentrations of pesticides were identified in soil samples collected from SB-1, SB-4, SB-7, and SB-8 above the corresponding MSWSCTL. However, none of the pesticide concentrations were found to exceed the default commercial or residential SCTL for direct contact exposure. Furthermore, none of the remaining soil samples were found to exceed the ground water leachability SCTLs. These results confirm the findings of the Limited Phase II ESA.

3.3.4 Expanded Phase II ESA Ground Water Results

The ground water samples collected from the Site were analyzed for pesticides, ammonia, chlorides, copper, iron, phenols, and sodium. The following is a summary of the ground water quality data. A tabular summary of the ground water quality data is provided in **Appendix C**. The following is a concise narrative of the results.

Ground water samples from monitoring wells MW-1, MW-2, MW-3, MW-4, and MW-5 exhibited elevated concentrations of total iron above the applicable GCTL and the default Marine Surface Water Cleanup Target Level (MSWCTL). Furthermore, laboratory-reported concentrations of sodium were also identified in MW-1, MW-4, and MW-5 above the applicable

MSWCTL. Detectable concentrations of total copper were not identified in any of the ground water samples above the applicable GCTLs.

Ground water samples MW-1, MW-2, MW-3, MW-4, and MW-5 were found to contain elevated chloride concentrations above the applicable GCTL and MSWCTL.

Ammonia was identified in ground water sample MW-1 above the applicable GCTL. None of the other monitoring wells exhibited concentrations of ammonia above the applicable GCTLs. The ground water samples collected from the five monitoring wells were analyzed for organochlorine pesticides by USEPA Method 8081. No pesticide compounds were identified above the laboratory method detection limits (MDL) in any of the ground water samples collected from the Site.

The ground water quality data collected from the Site indicates that pesticide compounds are not present in the ground water above the laboratory MDL. This suggests that the pesticide concentrations in the soil are not readily leaching into the ground water. Furthermore, the prevailing site conditions do not promote the leaching of pesticides.

The results of the Expanded Phase II ESA confirmed the presence of ammonia in the ground water, above the GCTL, in the vicinity of the solid waste area (MW-1). Ammonia was not identified above the GCTL in monitoring wells MW-2, MW-3, and MW-4, which surround monitoring well MW-1. This suggested that the ammonia concentrations are localized. The presence of ammonia in the ground water may be the result of naturally occurring conditions or the presence of buried debris below the water table.

Elevated concentrations of chloride, sodium, and iron have been identified in the ground water. Given the fact that the site is immediately adjacent to a marine surface water body it is likely that the detectable chloride, sodium, and iron concentrations are the result of naturally occurring conditions and are not indicative of a release of regulated substances.

4.0 SITE ASSESSMENT

Site assessment activities were initiated at the Site based on the findings of the Limited and Expanded Phase II ESAs. The purpose of these activities, which were performed in accordance with Chapter 62,780, FAC, were to assess the nature and extent of the soil and ground water contamination identified at the Site during the Limited and Expanded Phase II ESAs. The site assessment activities were conducted in June 2009 and included the collection of soil and ground water samples from the Site. The following narrative documents the site assessment activities and results for the Jones Pier Site.

4.1 Site Assessment Activities

The following is a summary of the activities that were completed in support of this site assessment. Therese activities were conducted in accordance with the requirements of Chapter 62-780.600, Florida Administrative Code.

4.1.1 Soil Sampling

Soil samples were collected from 39 soil borings completed across the Site (**Figure 4**). Thirty-two of the soil borings were installed in the area of the former citrus grove, which is currently being used as a tree farm. Seven soil borings were installed on the homestead portion of the Site. The soil borings were installed using DPT. At each soil boring location, a two-inch diameter, four-foot long, stainless steel Macro-Core Soil Sampler was advanced into the subsurface for the purpose of collecting discrete soil samples. As the Marco-Core Sampler was advanced into the subsurface a four-foot long undisturbed soil sample was extruded into a dedicated acetate liner within the Macro-Core sampler.

At each soil boring location, unsaturated soil samples were collected above the water table from the dedicated acetate liners at the following intervals: 0 to 0.5 feet, 0.5 to 2.0 feet, and every 2 feet thereafter to the top of the water table. At several locations the water table was encountered at less than two feet below the land surface. In those instances the surface soil sample was collected from 0 to 0.5 feet and the subsequent soil sample was collected from 0.5 feet to the top

of the water table. The soil samples were placed on ice immediately after collection and transported to Advanced Environmental Laboratories, Inc., in Jacksonville, Florida, under chain-of-custody protocol.

A total of 93 soil samples, including 3 duplicate soil samples, were collected from the Site. These samples were analyzed for chlorinated pesticides using USEPA Method 8081. Copies of the corresponding laboratory data sheets are provided in **Appendix D**.

At the completion of the soil sampling, each soil boring was properly abandoned. The abandonment procedures consisted of backfilling the borehole with hydrated bentonite pellets. Except for the placement of a temporary survey flag, the ground surface at and around each soil boring location was returned to its original condition.

All down-holes tools and equipment were decontaminated between soil boring and sample locations. A rinsate sample was collected to confirm the effectiveness of the decontamination procedures. The rinstate sample consisted of collected laboratory-supplied deionized water that was poured through a decontaminated Macro Core Sample assembly.

4.1.2 Monitoring Well Installation and Ground Water Sampling

The site assessment activities included the installation of five additional monitoring wells (MW-1D, MW-2R, MW-7 and MW-8) at the Site (**Figure 5**). Monitoring wells MW-1, MW-2, MW-3, MW-4 and MW-5 were installed during the previous Expanded Phase II ESAs. Monitoring well MW-2R was installed to replace MW-2, which was damaged subsequent to the expanded Phase II ESA. The purpose of the additional monitoring wells is to further delineate the previously identified ground water impacts on the Site.

Each monitoring wells was installed using hollow-stem auger (HAS) techniques. With the exception of MW-1D, each of the new monitoring wells were installed to a depth of 12 feet bls. Monitoring wells MW-1D was installed to a depth of 20 feet bls to delineate the vertical extent of the ground water impacts. The monitoring wells were constructed of 2-inch diameter,

schedule 40 PVC casing and 0.010-inch machine slotted well screen. Monitoring wells MW-2R, MW-6, MW-7, and MW-8 were constructed with 10 feet of well screen, whereas MW-1D was constructed with 5-feet of well screen. The PCV casing, screens and 20/30 grain sand pack were installed through the HSAs. The sand pack, which was placed in the annular space between the well screen and the borehole wall was extended approximately 1 to 2 feet above the top of the screen. Each monitoring well was completed at grade with a locking pressure cap, concrete pad, and steel manhole cover. Copies of the well construction logs are included in **Appendix E**.

The monitoring wells were developed following installation. Well development was performed to remove the sediment that accumulated within the monitoring well casing and screen during installation as was as to facilitated hydraulic communication between the sand pack the water-bearing formation.

Ground water samples were collected from the Site on two separate occasions – June 11, 2009 and July 22, 2009. During the July 2009 sampling events the location of monitoring well MW-3 was under water as the results of recent rain fall events. Therefore, no ground water samples were collected from MW-3 in July 2009.

The monitoring wells were purged prior to sampling using low-flow techniques. Field parameters (temperature, pH, specific conductivity, dissolved oxygen, and turbidity) were measured and recorded throughout the purging process. In accordance with the FDEP's Standard Operating Procedures (SOP), ground water samples were collected from the monitoring wells once the field parameters stabilized. Copies of the ground water sampling logs are included in **Appendix F**. The ground water samples were immediately placed on ice for delivery to AEL under chain of custody protocol. The ground water samples collected from the Site were analyzed for the following parameters:

- Chlorinated pesticides by USEPA Method 8081
- Nitrate + Nitrite by USEPA Method 4500
- Ammonia by USEPA Method E350
- Total Dissolved Solids by USEPA Method 2540C

4.1.3 Surveying

The northing and easting coordinates for the soil borings and monitoring wells were surveyed by KHA's survey crew, under the direction of a Professional Land Surveyor licensed in the State of Florida. Additionally, the monitoring well top of casing elevations were surveyed relative to NAVD (North American Vertical Datum) 1988.

4.1.4 Water Well Survey

KHA conducted a survey of the water wells located within a 0.5-mile radius of the subject Site. The survey consisted of the following:

- A drive-by survey of the properties within 0.5-miles of the Site
- A review of the well completion reports available through the St. Johns River Water Management District (SJRWMD).

A drive by survey was completed to determine whether the properties immediately adjacent to the Site or within a 0.5-mile radius of the Site are serviced by water wells. Several of the neighborhoods located adjacent to the Site are gated, thereby limited access for the drive-by water well survey. For those properties that were accessible for the drive-by survey, KHA made note of evidence that may be indicative of water wells being present. Such evidence included the presence of wellheads, pump houses, iron staining on sidewalks, and buildings, etc.

Subsequent to the drive-by survey, KHA obtains well completion reports from the SJRWMD between January 1, 1970 through December 8, 2009 for Township 31 South, Range 39 East and Section 35 and 36 and Township 32 South, Range 39 East and Section 1 (**Appendix G**).

4.2 Results

The following is a summary of the results of the site assessment activities undertaken for the Jones Pier Site.

4.2.1 Soil Sampling Results

A total of 93 soil samples were collected from the Site, which were analyzed for the presence of chlorinated pesticides by USEPA Method 8081. The soil samples were analyzed by Advanced Environmental Laboratories, Inc., which is accredited by the NELAC (National Environmental Laboratory Accreditation Conference) Institute. Copies of the corresponding laboratory data sheets are included in **Appendix D**.

None of the soil samples collected from the Site were found to contain detectable concentrations of pesticides above the default commercial or residential direct-contact exposure SCTL. However, 13 of the 93 soil samples were found to contain elevated concentrations of dieldrin above the ground water leachability soil clean-up target level (LSCTL) established in Chapter 62-777, FAC (**Table 1**). The elevated dieldrin concentrations were detected in the near surface (0 to 0.5 feet) soil sample at the following soil borings SB-102, SB-103, SB-107, SB-116, SB-117, SB-119, SB-120, SB-131, and SB-132. Similarly, dieldrin was identified in the sub-surface soil samples (0.5 to 2.0 feet) at the following soil borings SB-104, SB-116, and SB-120. The dieldrin concentrations in the surface and subsurface soil samples ranged from 0.0025 mg/kg to 0.02 mg/kg. One soil sample, SB-203 (0 to 0.5') was found to contain p, p-DDE at a concentration of 0.16 mg/kg, which exceeds the default leachability freshwater surface water SCTL (**Table 1**). No other pesticide compounds were identified above the laboratory method detection limits (MDL) in the soil samples collected from the Site.

The dieldrin concentrations in the soil appear to be confined to four areas on the Site. The largest area is situated on the western side of the Site and is associated with soil borings SB-117, SB-119, SB-128, SB-131, and SB-132 (**Figure 6**). The second area is situated along the northern property boundary and is comprised of soil borings SB-102, SB-103, and SB-104 (**Figure 6**). Two smaller dieldrin areas are also located on the Site and are associated with soil borings SB-107 and SB-116.

4.2.2 Ground Water Sampling Results

Ground water samples were collected from monitoring wells MW-1, MW-1D, MW-2R, MW-4, MW-5, MW-7, and MW-8 in June and July 2009. The ground water samples were analyzed by AEL and the corresponding laboratory data sheets are included in **Appendix D**.

During the June 2009 sampling event, pesticides were not identified above the laboratory MDL in the ground water samples collected from the Site. However, detectable concentrations of ammonia were identified in the ground water. The ammonia concentrations ranged from 0.12 to 1.5 mg/L (**Table 2**). However, none of the detectable ammonia concentrations exceeded the GCTL.

Similar to the June 2009 sampling event, detectable concentrations of pesticides were not identified in the ground water above the applicable GCTLs. However, detectable concentrations of ammonia were identified in the samples collected from each monitoring well (**Table 2**). With one exception, none of ammonia concentrations exceeded the GCTL. Monitoring well MW-2R contained ammonia at 3.7 mg/L, which is slightly above the GCTLs (2.8 mg/L).

4.2.3 Ground Water Flow Direction

The depth to ground water was measured in each monitoring well prior to sampling (**Table 3**). This data was used to establish the water table elevation across the Site and localized direction of ground water flow. Ground water contour maps were prepared based on the depth to ground water data collected from each sampling event (**Figure 7** and **Figure 8**).

The localized direction of ground water flow across the Site is to the west, toward the Indian River. The average hydraulic gradient across the Site is approximately 0.0014, based on the ground water contour maps.

4.2.4 Well Survey

The results of the drive-by survey and information obtained from the SJRWMD indicate that various water wells are located within 0.5 miles of the subject Site. The nearest well to the Site

is associated with the residential property located adjacent to the southwest corner of the Site (**Figure 9**). KHA was unable to access the residential neighborhoods immediately north and south of the Site to conduct a drive-by well survey. According to the SJRWMD, the residential property south of the Site is serviced by a consumptive use permit (CUP) (**Figure 10**). The residential neighborhood approximately 0.25-miles north of the Site is also serviced by a CUP.

4.2.5 Quality Assurance/Quality Control

Quality Assurance/Quality Control (QA/QC) samples were collected during the soil and ground water sampling activities to assess the sampling methodologies and confirm the accuracy of the laboratory results. The QA/QC samples consisted of rinsate equipment blanks and blind duplicate samples.

A rinsate equipment blank ("Soil Equipment Blank") was collected during the soil sampling activities. Detectable concentrations of pesticides were not identified in the soil equipment blank above the laboratory MDL (**Appendix D**).

Three duplicate samples were collected during the soil sampling activities. The duplicated and their corresponding samples are as follows: Dup No 1 (SB-110 (0.5 to 2.0')), Dup No 2 (SB-111 (0.5 to 1.0')), and Dup No 3 (SB-120 (2.0 to 4.0')). The results of the blind duplicate samples confirm the laboratory results for the corresponding samples.

Blind duplicate samples were also collected during the two ground water sampling events. During the June sampling event duplicate samples were collected from monitoring wells MW-4 (DUP 1) and MW-5 (DUP 2). During the July sampling event duplicate samples were retained from monitoring wells MW-1 (DUP 1) and MW-2R (DUP 2). The results of the duplicate samples confirm the laboratory results for the corresponding samples (**Appendix D**).

5.0 CONCLUSIONS

A site assessment was completed for the Jones Pier Site based on evidence of soil and ground water contamination identified during the completion of environmental due diligence activities conducted on behalf of the current property owner Indian River County. The soil and ground water impacts identified on the Site are the result of the historical use of the property for citrus cultivation.

The site assessment activities included the collection of samples from 39 soil borings and 8 monitoring wells installed across the Site. A total of 93 soil samples were collected from the Site which were analyzed for chlorinated pesticides. The eight monitoring wells were sampled on two separate occasions for chlorinated pesticides, nitrate + nitrite, ammonia, and total dissolved solids. All field sampling activities were conducted in general accordance with the FDEP's Standard Operating Procedures.

The results of the site assessment suggest that low level concentrations of dieldrin are present in the surface and near surface soils at concentrations exceeding the ground water leachability soil clean-up target levels. However, pesticides are not present in the soil above the default commercial or residential direct-contact exposure soil cleanup target levels. The extent of the dieldrin impacts are limited to four areas on the Site. In addition to dieldrin, p, p-DDE was identified above the laboratory MDL at one location at the Site. The p, p-DDE concentration exceeds the fresh water leachability soil clean-up target level.

Samples collected from the eight monitoring wells indicate that pesticides are not present in the ground water across the Site. However, elevated ammonia concentrations are present in the ground water within the vicinity of the low-lying area in the central portion of the Site. The elevated ammonia concentration was identified in one monitoring well (MW-2R) during the July 2009 sampling event. During the previous sampling event in June 2009, the ammonia concentration in the monitoring well was below the ground water clean-up target level.

The absence of pesticides in the ground water suggests that leaching of pesticides from the soil into the ground water is not readily occurring at the Site. Thus, the pesticide concentrations identified in the soil do not pose a threat to the localized ground water quality.

Elevated concentrations of ammonia have been identified in the ground water in the central portion of the Site. However, the detectable concentrations have been slightly above the ground water clean-up target level. The central portion of the Site is characterized by a low-lying, heavily vegetated area that often contains standing water. Evidence of soil waste was observed at the land surface in this area. However, no evidence was identified to suggest that buried soil waste is present in this area. Thus, the presence of ammonia in the ground water is likely the results of naturally occurring conditions.

The nature and extent of the low-level soil and ground water impacts have been delineated on the Site. Based on the soil and ground water quality no additional assessment or monitoring is warranted at this time. Indian River County intends to maintain the property for conservation purposes. As such, the use of the property will be constrained by institutional controls.

6.0 NO FURTHER ACTION PROPOSAL

Based on the results of the site assessment, the Site is eligible to receive a No Further Action order in accordance with Chapter 62-780.680, FAC. As such, the following No Further Action Proposal has been prepared for the Site based on the results of the site assessment activities.

The identified soil impacts do not pose a threat to human health or the environment. The site assessment data indicates that low-level pesticide concentrations in the soil are not leaching into the ground water. Furthermore, the ground water contamination identified on the Site is confined to the Site and encompasses an area less than ¼-acre in size.

Under the terms of the County's acquisition of the Site, the Site must be maintained for conservation purposes in perpetuity. The County is prohibited from developing the Site. Institutional controls will be used to limit the future use of the property.

Based on the foregoing, Indian River County proposes Risk Management Option Level II as an effective strategy for addressing the identified soil and ground water impacts. Institutional controls will be applied to the Site with respect to the identified soil and ground water impacts. The institutional controls will be prepared in accordance with the FDEP's *Institutional Controls Procedures Guidance, November 2004*. Subsequent to the FDEP's approval of the No Further Action Proposal, the corresponding deed restriction will be submitted to the Department under a separate cover.

Indian River County – Waste Cleanup
Jones Pier Vero Beach
7770 Jungle Trail
Vero Beach, Florida 32963-3916
FDEP WCU Site ID No. COM_298865
Site Rehabilitation Completion Order (SRCO) Without Conditions

Dear Mr. DeBlois:

The Central District's Waste Cleanup Program has reviewed the August 27, 2010, Site Assessment Report Addendum. This document was prepared by Kimley-Horn and Associates, Inc., for the Jones Pier Vero Beach site, located at 7770 Jungle Trail, Vero Beach, Indian River County, Florida. Maps showing the location of the Jones Pier Vero Beach site and the former location of the "contaminated site" for which this Order is being issued are attached as Exhibit 1: Figure No. 1, Site Location Map, and Exhibit 2: Figure No. 2, Site Map, and are incorporated by reference herein.

The contamination consisted of dieldrin, which was discovered in the soil during an environmental site assessment conducted in April 2008. The map showing the locations of soil samples collected for laboratory analysis is attached as Exhibit 3: Figure No. 3, Sample Location Map, and is incorporated by reference herein. The contamination resulted from the application of insecticides. The August 27, 2010, Supplemental Assessment Report Addendum contained a No Further Assessment proposal. The No Further Assessment Proposal is supported by earlier submittals, prepared pursuant to Rule 62-780.600, Florida Administrative Code (F.A.C.), including, but not limited to:

December 23, 2009, Site Assessment Report, that was received on December 24, 2009;

August 27, 2010, Supplemental Assessment Report Addendum, that was received on August 30, 2010;

Well Abandonment Report, which was received on April 11, 2011.

Based on the documentation submitted with the above-referenced documents, the Department has reasonable assurance that Indian River County Government has met the criteria in Chapter 62-780, F.A.C. The submittals indicate that soil contaminant concentrations are below the applicable Soil Cleanup Target Levels as adopted in Chapter 62-777, F.A.C. (Effective date April 17, 2005.) Therefore, you have satisfied the site rehabilitation requirements for the above-referenced contaminated site and are released from any further obligation to conduct site rehabilitation at the contaminated site, except as set forth below. See the attached Exhibit 4: Table 1, Soil Detected Analyte Summary, incorporated by reference herein, which includes information regarding the contaminants, affected media, and applicable cleanup target levels for the contaminated site that is the subject of this Order.

Further, in accordance with Chapter 376.30701(4), Florida Statutes (F.S.), upon completion of site rehabilitation, additional site rehabilitation is not required unless it is demonstrated that:

(a) Fraud was committed in demonstrating site conditions or completion of site rehabilitation;

(b) New information confirms the existence of an area of previously unknown contamination which exceeds the site-specific rehabilitation levels established in accordance with Section 376.30701(2), F.S., or which otherwise poses the threat of real and substantial harm to public health, safety, or the environment;

(c) A new discharge of pollutants or hazardous substances occurs at the site subsequent to the issuance of this Order.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, F.S., within **21** days of receipt of this Order. The procedures for petitioning for a hearing are set forth below.

Persons affected by this Order have the following options:

A. If you choose to accept the Department's decision regarding this SRCO, you do not have to do anything. This Order is final and effective on the date filed

with the Clerk of the Department, which is indicated on the last page of this Order.

B. If you choose to challenge the decision, you may do the following:

1. File a request for an extension of time to file a petition for hearing with the Department's Agency Clerk in the Office of General Counsel within **21** days of receipt of this Order. Such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for hearing; or

2. File a petition for administrative hearing with the Department's Agency Clerk in the Office of General Counsel within **21** days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for Hearing

For good cause shown, pursuant to Rule 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for hearing. Such a request must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within **21** days of receipt of this Order. Petitioner, if different from the Indian River County Government, shall mail a copy of the request to the Indian River County Government, Attention: Mr. Roland DeBlois, Environmental Planning and Code Enforcement Section, 1801 27th Street, Vero Beach, FL 32960-3388 at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for administrative hearing must be made.

How to File a Petition for Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, MS 35, Tallahassee, Florida, 32399-3000, within **21** days of receipt of this Order. Petitioner, if different from the Indian River County Government, shall mail a copy of the petition to the Indian River County Government, Attention: Mr. Roland DeBlois, Environmental Planning and Code Enforcement Section, 1801 27th Street, Vero Beach, FL 32960-3388, at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Section 120.569(2), F.S., and Rule 28-106.201, F.A.C., a petition for administrative hearing shall contain the following information:

a) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the site owner's name and address, if different from the petitioner; the DEP facility number; and the name and address of the facility;

b) A statement of when and how each petitioner received notice of the Department's action or proposed action;

c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;

d) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;

e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;

f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action; and

g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective on the date filed with the Clerk of the Department, which is indicated on the last page of this Order. Timely filing a petition for administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Agency Clerk of the Department in the Office of General Counsel, Mail Station 35, 3900 Commonwealth Boulevard, Tallahassee, Florida 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within thirty days after this order is filed with the clerk of the Department (see below).

Questions

Any questions regarding the Department's review of the August 27, 2010, Supplemental Assessment Report Addendum should be directed to Dr. Mitchell F. Katz, Ph.D. at the Florida department of Environmental Protection, Central District Office, Suite 232, 3319 Maguire Boulevard, Orlando, FL 32803-3767. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850)245-2242. Contact with any of the above does not constitute a petition for administrative hearing or request for an extension of time to file a petition for administrative hearing.

Sincerely,

Vivian F. Garfein
Director, Central District

Notes:

ft, bls = feet below land surface
mg/kg = milligrams per kilogram
CAS# = Chemical Abstract Number
LGW = Groundwater Leachability Criteria *
LFW = Fresh Water Leachability Criteria *
* = Regulatory limits that must be calculated based on other analysis or time accrual are flagged by SELECT AEL by utilizing a "0" limit. This causes results for such analytes to register as an exceedance to draw your attention.

Soil Formatting

TEXT = Exceeds LeachabilitySoil Cleanup Target Level
TEXT = Exceeds Leachability Fresh Surface Water Soil Cleanup Target Level
U = Result was less than the Method Detection Limit (MDL).
I = Result was greater than or equal to the Method Detection Limit (MDL) but below the Practical Quantitation Limit (PQL).

No groundwater or surface water contamination from dieldrin and/or p,p'-DDE was detected.

CERTIFICATION

Facility: Jones Pier Vero Beach
Address: 7770 Jungle Trail, Vero Beach, Indian River County, FL 32963-3916
Site ID: COM_298865
Activity: **August 27, 2011, Site Assessment Report Addendum**

I HEREBY CERTIFY, that in my professional judgment, August 27, 2011, "Site Assessment Report Addendum" has satisfied the requirements for remediation of petroleum contamination in the soil at the location of the proposed retention pond, which is located in Orlando, Florida, pursuant to Chapter 62-770, Florida Administrative Code.

_____ I personally completed this review.

__X__ This review was conducted by Mitchell F. Katz, Ph.D., working under my supervision.

RE: In Compliance
Regulated storage tank facility:
Indian River Cnty Sea Oaks WWTF, 8765 N A1A, Vero Beach, FL
FDEP Facility ID number: 9801843
Brevard County Natural Resource Management Department – Tanks Section

Dear Mr. Vega:

A storage tank closure inspection and file review was conducted at your facility on September 18, 2024 by the Brevard County Natural Resource Management Office, on behalf of the Florida Department of Environmental Protection. Based on the information provided during the inspection, the facility was determined to be in compliance with the Department's storage tank rules and regulations. A copy of the inspection report is attached for your records.

The Department sincerely appreciates your efforts to maintain this facility in compliance with state and federal rules. Should you have any questions or comments, please contact me at (321) 350-8428 or jeffrey.grantham@brevardfl.gov.

Respectfully,

Jeffrey Grantham
Compliance Inspector

Inspection Comments

09/20/2024
1,000 gallon convault tank is being removed from the facility today 9/19/2024. It will not be replaced. Tank has not been used for many years. Cliff Berry was onsite 9/18/2024 to remove fuel and clean the tank. The tank will be taken to a facility in Rockledge to be recycled/scrapped. A limited closure assessment report will be submitted to document all closure activities. Tank will be registered with the FDEP as removed from site.

Per the attached Limited Closure Report: On 9/18/2024 JSR contracted Cliff Berry Inc to triple rinse and clean 1000 gallon Convault tank, associated piping and day tank. Once cleaned and waste manifested, JSR Fueling Technologies closed off tank fill ports and openings. On 9/19/2024, JSR arrived on site at 10am with crane and trailer and removed the 1000 gallon fuel tank from site. JSR transported tank to scrap yard in Rockledge FL for recycling. Waste and destruction receipts provided to FDEP for closeout.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

FEMA Flood Zone Definitions

Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front al dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

Hydrologic Information

Moderate and Minimal Risk Areas

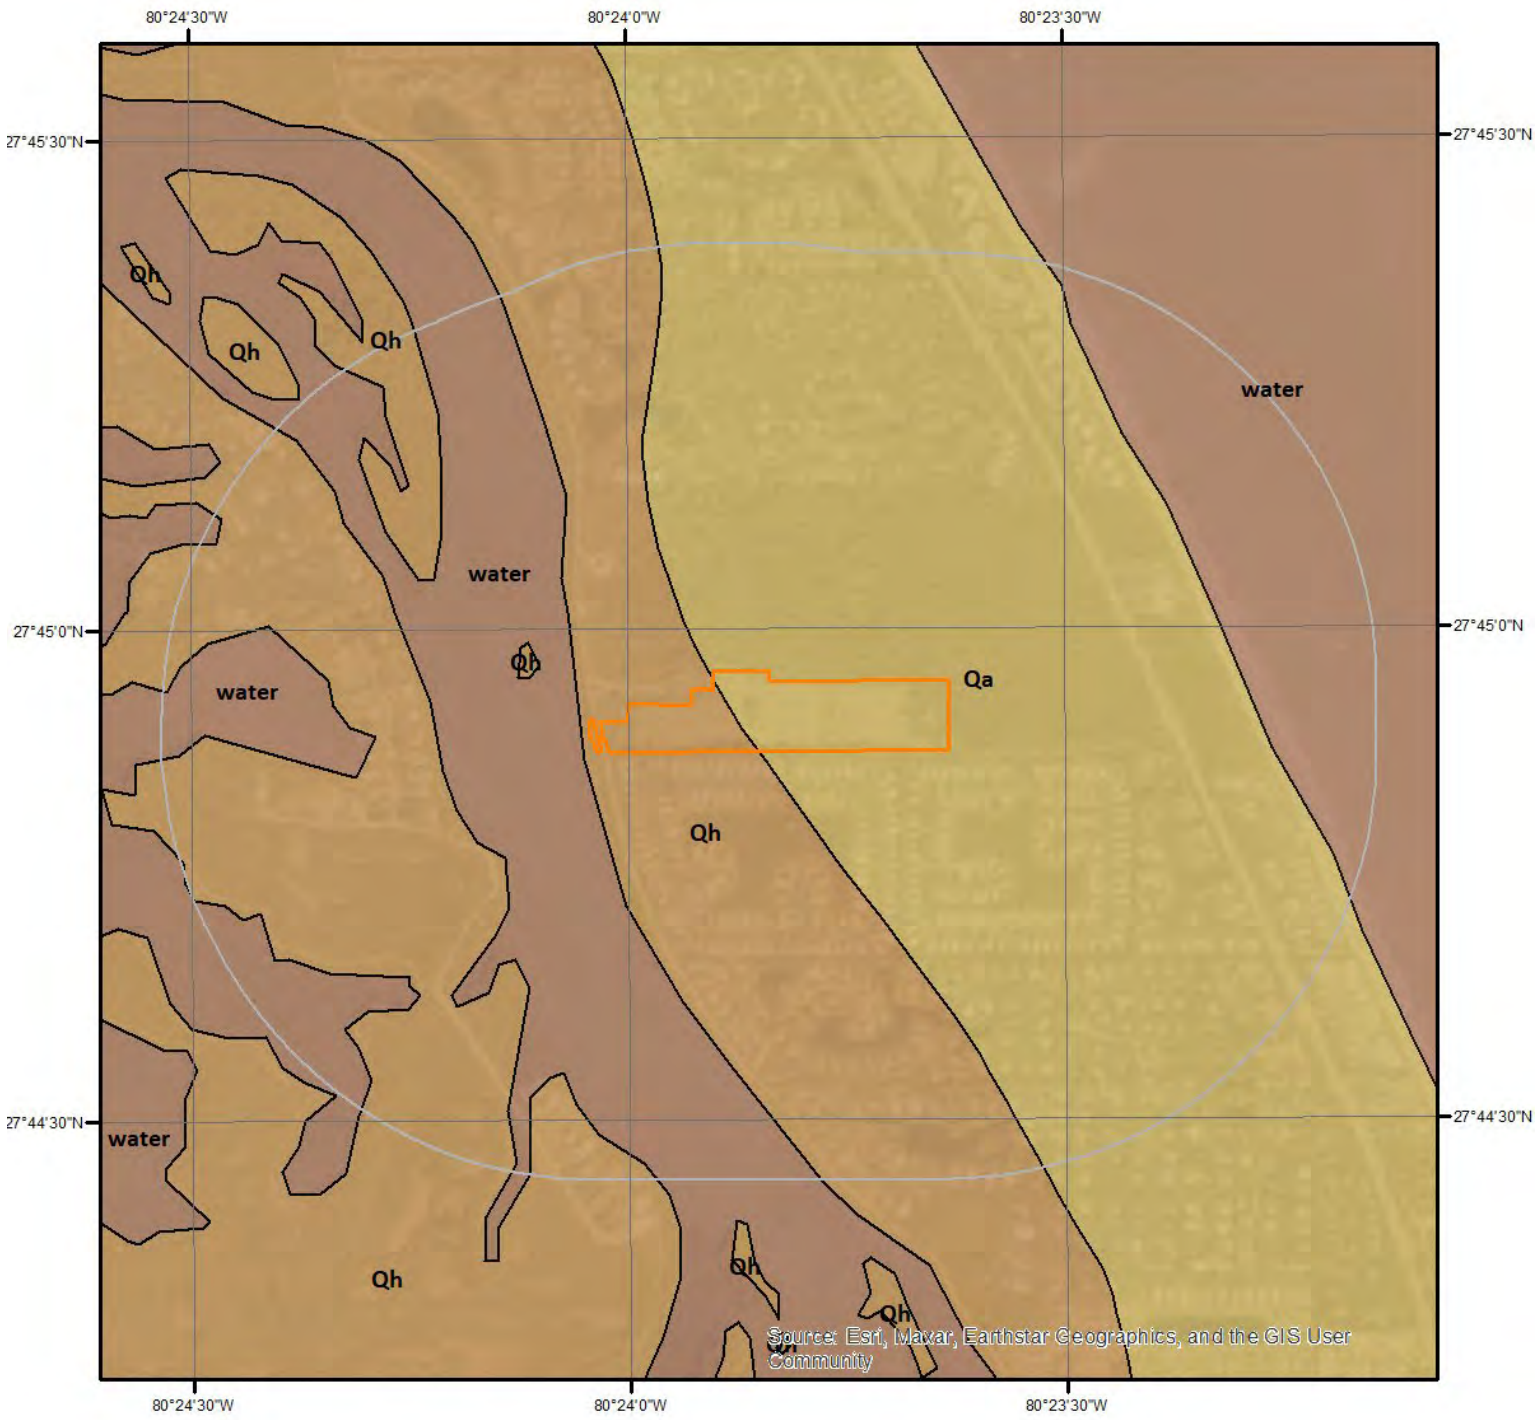
Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Geologic Information



Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Qh

Unit Name:	Holocene sediments
Unit Age:	Holocene
Primary Rock Type:	Sand
Secondary Rock Type:	
Unit Description:	The Holocene sediments in Florida occur near the present coastline at elevations generally less than 5 feet (1.5 meters). The sediments include quartz sands, carbonate sands and muds, and organics.

Geologic Unit Qh

Unit Name:	Holocene sediments
Unit Age:	Holocene
Primary Rock Type:	Sand
Secondary Rock Type:	
Unit Description:	The Holocene sediments in Florida occur near the present coastline at elevations generally less than 5 feet (1.5 meters). The sediments include quartz sands, carbonate sands and muds, and organics.

Geologic Unit Qh

Unit Name:	Holocene sediments
Unit Age:	Holocene
Primary Rock Type:	Sand
Secondary Rock Type:	
Unit Description:	The Holocene sediments in Florida occur near the present coastline at elevations generally less than 5 feet (1.5 meters). The sediments include quartz sands, carbonate sands and muds, and organics.

Geologic Unit Qh

Unit Name:	Holocene sediments
Unit Age:	Holocene
Primary Rock Type:	Sand
Secondary Rock Type:	
Unit Description:	The Holocene sediments in Florida occur near the present coastline at elevations generally less than 5 feet (1.5 meters). The sediments include quartz sands, carbonate sands and muds, and organics.

Geologic Unit Qa

Unit Name:	Anastasia Formation
Unit Age:	Pleistocene
Primary Rock Type:	Sand
Secondary Rock Type:	Limestone

Geologic Information

Unit Description:	The Atlantic Coastal Ridge is underlain by the Anastasia Formation from St. Johns County southward to Palm Beach County. Excellent exposures occur in Flagler County in Washington Oaks State Park, in Martin County at the House of Refuge on Hutchinson Island and at Blowing Rocks in Palm Beach County. An impressive exposure of Anastasia Formation sediments occurs along Country Club Road in Palm Beach County (Lovejoy, 1992). The Anastasia Formation generally is recognized near the coast but extends inland as much as 20 miles (32 kilometers) in St. Lucie and Martin Counties. The Anastasia Formation, named by Sellards (1912),is composed of interbedded sands and coquinoid limestones. The most recognized facies of the Anastasia sediments is an orangish brown, unindurated to moderately indurated, coquina of whole and fragmented mollusk shells in a matrix of sand often cemented by sparry calcite. Sands occur as light gray to tan and orangish brown, unconsolidated to moderately indurated, unfossiliferous to very fossiliferous beds. The Anastasia Formation forms part of the surficial aquifer system.

Geologic Unit water

Unit Name:	water

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 1 (7.44%)

Map Unit Name:	Canaveral fine sand, 0 to 5 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	76cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Canaveral(85%)

horizon A(0cm to 13cm)	Fine sand
horizon C(13cm to 43cm)	Fine sand
horizon Ck1(43cm to 124cm)	Paragravelly fine sand
horizon Ck2(124cm to 203cm)	Very paragravelly fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1 - Canaveral fine sand, 0 to 5 percent slopes

Component: Canaveral (85%)
The Canaveral component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on ridges on marine terraces on coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is very high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 30 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 2 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: St. Augustine (6%)
Generated brief soil descriptions are created for major soil components. The St. Augustine soil is a minor component.

Component: Myakka (3%)
Generated brief soil descriptions are created for major soil components. The Myakka soil is a minor component.

Component: Pompano (3%)
Generated brief soil descriptions are created for major soil components. The Pompano soil is a minor component.

Component: Palm Beach (2%)
Generated brief soil descriptions are created for major soil components. The Palm Beach soil is a minor component.

Component: Captiva (1%)
Generated brief soil descriptions are created for major soil components. The Captiva soil is a minor component.

Map Unit 100 (80.63%)

Map Unit Name:	Waters of the Atlantic Ocean

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Soil Information

Map Unit: 100 - Waters of the Atlantic Ocean

Component: Waters of the Atlantic Ocean (100%)
Generated brief soil descriptions are created for major soil components. The Waters of the Atlantic Ocean is a miscellaneous area.

Map Unit 17 (0.11%)

Map Unit Name:	Quartzipsamments, 0 to 5 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Quartzipsamments(85%)	
horizon C(0cm to 203cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 17 - Quartzipsamments, 0 to 5 percent slopes

Component: Quartzipsamments (85%)
The Quartzipsamments component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on fills on rises on marine terraces on coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 0 percent. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Arents (5%)
Generated brief soil descriptions are created for major soil components. The Arents soil is a minor component.

Component: Pits (5%)
Generated brief soil descriptions are created for major soil components. The Pits soil is a minor component.

Component: Urban land (5%)
Generated brief soil descriptions are created for major soil components. The Urban land soil is a minor component.

Map Unit 18 (3.6%)

Map Unit Name:	Captiva fine sand, frequently ponded, 0 to 1 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	8cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Captiva(92%)	
horizon Akn(0cm to 15cm)	Fine sand
horizon Ckn(15cm to 76cm)	Fine sand
horizon Ckng(76cm to 203cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Soil Information

Map Unit: 18 - Captiva fine sand, frequently ponded, 0 to 1 percent slopes

Component: Captiva (92%)
The Captiva component makes up 92 percent of the map unit. Slopes are 0 to 1 percent. This component is on drainageways on marine terraces on coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 3 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 2 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 10 within 30 inches of the soil surface.

Component: Canaveral (4%)
Generated brief soil descriptions are created for major soil components. The Canaveral soil is a minor component.

Component: Kesson (4%)
Generated brief soil descriptions are created for major soil components. The Kesson, tidal soil is a minor component.

Map Unit 20 (1.46%)

Map Unit Name:	Beaches

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 20 - Beaches

Component: Beaches (100%)
Generated brief soil descriptions are created for major soil components. The Beaches is a miscellaneous area.

Map Unit 35 (1.68%)

Map Unit Name:	Mckee mucky clay loam
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	C/D - These soils have moderately high runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Mckee(90%)

horizon A(0cm to 3cm)	Mucky clay loam
horizon Cg1(3cm to 152cm)	Sandy clay
horizon Cg2(152cm to 203cm)	Sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 35 - Mckee mucky clay loam

Component: Mckee (90%)
The Mckee, tidal component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on mangrove swamps on marine terraces on coastal plains. The parent material consists of loamy and clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is frequently flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 18 percent. Nonirrigated land capability classification is 8. This soil meets hydric criteria. The soil has a strongly saline horizon within 30

inches of the soil surface. The soil has a maximum sodium adsorption ratio of 50 within 30 inches of the soil surface.

Component: Riomar (10%)
Generated brief soil descriptions are created for major soil components. The Riomar, tidal soil is a minor component.

Map Unit 7 (5.04%)

Map Unit Name:	Palm Beach sand, 0 to 8 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Palm Beach(90%)	
horizon Ak(0cm to 10cm)	Sand
horizon Ck(10cm to 203cm)	Very paragravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 7 - Palm Beach sand, 0 to 5 percent slopes

Component: Palm Beach (95%)
The Palm Beach component makes up 95 percent of the map unit. Slopes are 0 to 5 percent. This component is on dunes on marine terraces on coastal plains, ridges on marine terraces on coastal plains. The parent material consists of shells and sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is very high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 15 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Canaveral (5%)
Generated brief soil descriptions are created for major soil components. The Canaveral soil is a minor component.

Map Unit 99 (0.04%)

Map Unit Name:	Water

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 99 - Water

Component: Water (100%)
Generated brief soil descriptions are created for major soil components. The Water is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *INDIAN RIVER* County: **3**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *INDIAN RIVER* County

No Measures/Homes:	46
Arithmetic Mean:	0.3
Standard Deviation:	0.2
Maximum:	1.1
% >4 pCi/L:	-
% >8 pCi/L:	-
% >12 pCi/L:	-
Notes on Data Table:	TABLE 2. Indoor radon results from the Florida population-based radon survey, by county.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

This list of drinking water violations and enforcement actions is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database, as part of the national download of Safe Drinking Water Act (SDWA) data. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program, including monitoring, enforcement, and violation data related to requirements established by the SWDA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

This national download of Safe Drinking Water Act (SDWA) data is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program related to requirements established by the Safe Drinking Water Act (SDWA). Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP

is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Florida Subsidence Incident Reports — **SINKHOLES**

A list of Florida Subsidence Incidents made available by the Florida Department of Environmental Protection (DEP) and maintained by the Florida Geological Survey. Sinkholes are closed depressions in areas underlain by soluble rock such as limestone, dolostone, and in some states gypsum and salt. Other subterranean events can cause holes, depressions, or subsidence of the land surface that may mimic sinkhole activity. Commonly, a reported depression is not verified by a licensed professional geologist to be a true sinkhole, and the cause of subsidence is not known. Such an event is called a subsidence incident.

Oil and Gas Wells — **OGW**

The Oil and Gas Program is the permitting authority within the Florida Department of Environmental Protection's Mining and Minerals Regulation Program. Companies interested in exploration or production of hydrocarbons in Florida are regulated by the Oil and Gas Program. This data is made available by Florida Department of Environmental Protection's Oil and Gas program.

Public Water Supply Wells — **PWSW**

The Public Water Supply Wells (PWSW) data consist of public water supply facilities and their wells in Florida, excluding Federally owned facilities. This data is made available by Florida Department of Environmental Protection, Water Compliance Assurance Program.

Underground Injection Control Wells — **UIC**

Class I Underground Injection Control (UIC) wells that are currently or were previously active, as well as proposed sites, regulated by the Florida Department of Environmental Protection (FDEP). Class I UIC wells are used to inject nonhazardous waste, hazardous waste (new hazardous waste wells were banned in 1983), or municipal waste below the lowermost underground source of drinking water.

Water Use Permits Sites - South Florida Water Management District — **WELLS**

List of Water Use Permitting Facilities consisting of wells, pumps and culverts, made available by the South Florida Water Management District. The facilities represent a subset of all wells, pumps and culverts associated with Water Use Permits. A Water Use Permit is required for all water uses except single family and duplex use and fire fighting.

Water Well Completions - Northwest Florida Water Management District — **WATER WELLS**

A list of existing well permits provided by the Northwest Florida Water Management District, representing records for wells permitted for construction/repair/abandonment beginning in the year 1976; does not typically contain data on wells constructed prior to 1976. The data provided may therefore only represent a fraction of existing wells. The data are provided by water well contractors on completion reports and, in most cases, has not been verified by District staff.

Water Well Completions - St. Johns River Water Management District — **WATER WELLS**

A list of wells in the Water Well Completion Report database made available by the St. Johns River Water Management District (SJRWMD). The SJRWMD advises that data reported in the Water Well Completion Report are obtained from multiple sources, including SJRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SJRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Water Well Completions - Suwanee River Water Management District — **WELLS**

A list of wells in the Water Well Completion Report database made available by the Suwanee River Water Management District department (SRWMD). The SRWMD advises that data reported in the Water Well Completion Report are obtained from multiple sources, including SRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Water Well Construction Permits — **WELL CONST PERM**

Appendix

A list of water well construction permits issued by the St. Johns River Water Management District (SJRWMD).

Water Well Construction Permits - Southwest Florida Water Management District **WATER WELLS**

A list of permitted well construction sites within the Southwest Florida Water District (SWFWD) maintained by the Southwest Florida Water Management District (SWFWMD). A Well Construction Permit (WCP) is required prior to installation of a water well within the SWFWD. The WCP ensures that wells are constructed by qualified contractors and meet rigid safety and durability standards. This list includes historical well construction sites that may not have a recorded latitude and longitude for their location. Instead, address matching, quarter STR centroids, STR centroids, or county centroids, were used as the location. WCPs for wells under 4" were strictly enforced after 1990, meaning many domestic wells built before may be excluded from this dataset.

Water Wells - Suwanee River Water Management District **WATER WELLS**

A list of water wells made available by the Suwanee River Water Management District department (SRWMD). The SRWMD advises that data are obtained from multiple sources including SRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Well Surveillance Program Water Wells **WATER WELLS**

A list of privately and publicly owned potable wells from the Florida Department of Health's (DOH) Well Surveillance Program.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Unplottable Summary

Total: 0 Unplottable sites

DB	Company Name/Site Name	Address	City	Zip	ERIS ID

No unplottable records were found that may be relevant for the search criteria.

Unplottable Report

No unplottable records were found that may be relevant for the search criteria.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Currently on the Final NPL (F)' and/or the 'Site is Part of NPL Site (A)'. These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Sep 6, 2025

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Sep 6, 2025

Deleted NPL: DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Sep 6, 2025

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Aug 27, 2025

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Aug 27, 2025

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Sep 1, 2025

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Sep 1, 2025

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste. This list also includes RCRAInfo sites that have notified as LQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Sep 1, 2025

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month. This list also includes RCRAInfo sites that have notified as SQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Sep 1, 2025

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Sep 1, 2025

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Sep 1, 2025

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Sep 1, 2025

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made availabe by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Sep 29, 2025

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Sep 29, 2025

Land Use Controls Information System: LUCIS

The Land Use Controls Information System (LUCIS) database is sourced from the U.S. Department of the Navy (DON). This data contains information for former Base Realignment and Closure (BRAC) properties across the United States. DON's BRAC office was tasked with tracking certain base closures while requiring the prevention of risks to human health and the environment of those properties with LUCs in place. Regarding currently available LUC Sites data, the sites listing is limited to centroid point locations for the overall installation property boundaries. Formerly obtained LUC Sites data may reflect site details that applied previously for a BRAC property.

Government Publication Date: Jun 13, 2024

Institutional Control Boundaries at NPL sites: NPL IC

These boundaries of Institutional Control areas at sites on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL), or as Proposed or Deleted, are sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). The EPA's NPL includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes.

Government Publication Date: Sep 6, 2025

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Sep 7, 2025

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 8, 2025

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: Jan 9, 2024

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Jan 9, 2024

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

This list of petroleum refineries is sourced from the U.S. Energy Information Administration (EIA), Refinery Capacity Report. The listing includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year. The geographic area the report covers is the 50 States, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, and other U.S. possessions. Per the EIA, the facility location data represents the approximate location based on research of publicly available information from sources such as Federal agencies, company websites, and satellite images on public websites.

Government Publication Date: Oct 31, 2024

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from Oak Ridge National Laboratory hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Jun 5, 2025

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Aug 27, 2025

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Oct 30, 2025

State

Superfund Waste Cleanup & State-Funded Action Sites: SHWS

List of hazardous waste cleanup sites participating in various federal and state funded cleanup programs. Florida's State-Funded Action Sites and Superfund Waste Cleanup Sites lists are maintained and made available by the Florida Department of Environmental Protection (FDEP). This database serves a purpose similar to that of the federal Superfund Enterprise Management System (SEMS), functioning as a state-level counterpart for tracking potential hazardous substance release sites.

Government Publication Date: Oct 19, 2025

Delisted State-Funded Action Sites: DELISTED SHWS

This database contains a list of closed hazardous waste sites of various federal and state funded cleanup programs that were removed from the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Oct 19, 2025

ERIC Waste Cleanup: ERIC

Environmental Restoration Integrated Cleanup (ERIC) is a single database for tracking contaminated site cleanup activities in the Florida Department of Environmental Protection (DEP)'s Division of Waste Management (DWM). Includes records from 11 different DEP data systems, allowing tracking of a contaminated site throughout the course of cleanup regardless of which program area took the lead.

Government Publication Date: Oct 16, 2025

Florida Department of Environmental Protection Cleanup Sites: CLEANUP DEP

This Cleanup Sites dataset is provided by the Florida Department of Environmental Protection (FDEP), and the layer is included on the FDEP's Contamination Locator Map (CLM) tool. The data provides locations and document links for sites currently in the cleanup process and sites awaiting cleanup funding. Cleanup programs include Brownfields, Petroleum, EPA Superfund (CERCLA), Drycleaning, Responsible Party Cleanup, State Funded Cleanup, State Owned Lands Cleanup and Hazardous Waste Cleanup.

Government Publication Date: Oct 26, 2025

Waste Cleanup Responsible Party Sites: WCRPS

List of Open, Closed, and Inactive Waste Cleanup Responsible Party sites made available by the Florida Department of Environmental Protection.

Government Publication Date: Apr 11, 2021

Delisted Waste Cleanup Sites: DELISTED WCP

List of sites which once appeared on - and have since been removed from - the list of Waste Cleanup Sites made available by the Florida Department of Environmental Protection.

Government Publication Date: Oct 26, 2025

Solid Waste Facilities and Landfills: SWF/LF

The Solid Waste Facility Inventory Report made available by the Florida Department of Environmental Protection (FDEP) includes all types of authorized and unauthorized facilities: municipal solid waste, landfills, dumps, construction and demolition disposal, recycling facilities, and more.

Government Publication Date: Jun 20, 2025

Leaking Tanks: LST

This list of leaking storage tanks is sourced from the Florida Department of Environmental Protection (FDEP). The Storage Tank and Petroleum Contamination/Cleanup Monitoring (STCM) section is part of the Petroleum Restoration Program (PRP) in the FDEP's Division of Waste Management. The PRP encompasses the technical oversight, management, and administrative activities necessary to prioritize, assess and clean-up sites contaminated by discharges of petroleum and petroleum products from stationary petroleum storage systems. Over 28,000 facilities have reported discharges of petroleum products from storage tank systems. STCM database reports do not include discharges that are not required for Rule 62-780 as well as discharges that have already been cleaned up. Rule 62-780 applies to site rehabilitation conducted at sites contaminated with pollutants, hazardous substances, drycleaning solvents, petroleum and petroleum products. Florida relies on groundwater for about 92 percent of its drinking water needs and has some of the most stringent rules in the country.

Government Publication Date: Oct 23, 2025

Delisted Leaking Tanks: DELISTED LST

Whereas Leaking Tanks (LST) includes only facilities which currently have contamination as recorded by the Florida Department of Environmental Protection, this list contains facilities which were once included in LST data but no longer appear on the list made available by FDEP. Facilities may be removed from the current LST list because the discharge has been cleaned up, or the discharge is not required for 62-770.

Government Publication Date: Oct 23, 2025

Underground Storage Tanks: UST

List of Underground Storage Tank facilities made available by the Florida Department of Environmental Protection (FL DEP). Includes facilities tracked for active storage tanks, storage tank history, or petroleum cleanup activity. In an effort to minimize the occurrence and environmental risks of releases and discharges, FDEP administers standards pertaining to the construction, installation, operation, maintenance, repair, closure, and disposal of underground storage tank systems that store regulated substances.

Government Publication Date: Oct 28, 2025

Aboveground Storage Tanks: AST

List of Aboveground Storage Tank facilities made available by the Florida Department of Environmental Protection (FL DEP). Includes facilities tracked for active storage tanks, storage tank history, or petroleum cleanup activity.The Florida Department of Environmental Protection (FDEP) provides standards for aboveground storage tanks (ASTs) that have individual storage tank capacities greater than 550 gallons. The state also regulates the registration, construction, installation, operation, maintenance, repair, closure, and disposal of storage tank systems that store regulated substances.

Government Publication Date: Oct 28, 2025

Storage Tank Facilities: TANK

List of storage tank facilities made available by the Florida Department of Environmental Protection (FL DEP) for which tank information is not available. In the case of closed facilities - where all tanks have been removed or closed, and there is also no petroleum discharge or on-going cleanup activity - the owner data may not be current, but rather would represent the most recent information made available to FL DEP.

Government Publication Date: Oct 28, 2025

Delisted AST UST Storage Tanks: DEL UST AST TANK

This database contains a list of closed UST and AST storage tank sites that were removed from the Florida Department of Environmental Protection (FDEP) storage tank database.

Government Publication Date: Jul 2, 2015

Delisted Storage Tanks: DEL STORAGE TANK

List of sites that once appeared on - and have since been removed from - the list of UST and AST storage tank facilities made available by the Florida Department of Environmental Protection.

Government Publication Date: Oct 28, 2025

Federal Facilities Listing: FF TANKS

The Florida Department of Environmental Protection (FDEP) Storage Tank Program registers facilities and storage tanks where aboveground or underground storage tanks store pollutants, hazardous substances, and/or mineral acid substances regulated by Chapter 62-761, Florida Administrative Code, or when aboveground storage tanks or compression vessels store a hazardous substance which requires registration according to Chapter 376, Florida Statutes.

Government Publication Date: Oct 19, 2025

Storage Tank/Contaminated Facility Search: STCS

List of facilities and tanks in the Florida Department of Environmental Protection (FDEP) Bureau of Petroleum Storage Systems Storage Tank/Contaminated Facility Search. Note that tank details do not appear for facilities for which all tanks have been removed.

Government Publication Date: Aug 1, 2025

Institutional Controls Registry: INST

The Institutional Controls registry is maintained by the Florida Department of Environmental Protection (FDEP). The registry aims to help preserve adequate protection of contaminated soil regions and help to minimize any chances of exposure.

Government Publication Date: Oct 19, 2025

Engineering Controls: ENG

A listing of all engineering controls that are in place to eliminate or reduce the potential for contaminant migration and exposure to contaminants. These controls may include caps, barriers, guards or fences. The list is maintained by the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Oct 19, 2025

Voluntary Cleanup Sites: VCP

A listing of active and closed voluntary cleanup sites registered by the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Sep 8, 2025

Brownfield Sites: BROWNFIELDS

Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. This is a list of sites within designated Brownfield Areas within Florida where Brownfield Site Rehabilitation Agreement (BSRA)s have been executed between FDEP and a responsible party.
Government Publication Date: Oct 8, 2025

Brownfield Areas: BROWNFIELD AREA

Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. This is a list of Brownfield Areas, defined by the FDEP as contiguous areas of one or more brownfield sites, some of which may not be contaminated, that have been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. Because a variety of sources and methods were used to derive information for this data, locations are approximate.
Government Publication Date: Oct 8, 2025

Hazardous Waste Facility List: HAZ WASTE FAC

List of Hazardous Waste Financial Assurance Facilities made available by the Division of Waste Management of the Florida Department of Environmental Protection (FDEP). The FDEP's Hazardous waste financial responsibility requirements exist to ensure that certain hazardous waste facilities and transporters have the financial resources available to provide for closure, postclosure and corrective action requirements and/or pay for bodily injury or property damage that might result from accidents, spills or other unexpected events, known as liabilities. These closure, postclosure, corrective action and liability requirements are called financial assurance.
Government Publication Date: Jul 3, 2025

County Small Quantity Generators (SQG): SQG

This data is made available by the Small Quantity Generator Assessment, Notification and Verification (SQG ANV) Program, established under Sections 403.7225 and 403.7234, Florida Statutes. The program focuses on facilities classified as Small Quantity Generators (SQGs), defined in federal regulations as those that produce less than 2,200 pounds of hazardous waste in any calendar month. The SQG ANV Program requires local governments to identify and assess SQGs, notify them of their legal responsibilities for proper hazardous waste management, and conduct site visits to verify the types and amounts of hazardous waste generated and the waste management practices used.
Government Publication Date: Nov 20, 2025

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 4, which includes Florida, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Apr 21, 2025

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 4, which includes Florida, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Apr 21, 2025

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: May 22, 2025

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: May 22, 2025

County

No County databases were selected to be included in the search.

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's (EPA) Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. This dataset is sourced from the EPA's PFAS Analytic Tools, and it includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified as PFAS based on EPA's CompTox Chemicals Dashboard lists of PFAS with defined and undefined structures. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time. Note that some regulatory programs have specified chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard.

Government Publication Date: Oct 7, 2025

On-Scene Coordinator Response Sites: OSC RESPONSE

This list of On-Scene Coordinator (OSC) Response Sites is provided by the U.S. Environmental Protection Agency (EPA). OSCs are the federal officials responsible for monitoring or directing responses to all oil spills and hazardous substance releases reported to the federal government. OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

Government Publication Date: Oct 8, 2025

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Oct 10, 2025

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Sep 26, 2025

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2025 per agency entity dataset. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: May 30, 2025

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Aug 1, 2025

National Response Center PFAS Spills: PFAS ERNS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Sep 1, 2025

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Dec 16, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFAS Water Quality Portal Sampling Data: PFAS WATER

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

Government Publication Date: Jul 21, 2025

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest: PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Oct 4, 2025

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Sep 1, 2025

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: May 28, 2025

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Nov 30, 2023

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Government Publication Date: May 12, 2022

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Sep 29, 2025

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Government Publication Date: May 3, 2025

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jul 19, 2025

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites which once appeared on - and have since been removed from - the list of drycleaner facilities included in Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jul 19, 2025

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: Jul 10, 2025

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 8, 2025

Surface Mining Control and Reclamation Act Sites: SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Oct 30, 2025

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). The intent of the site location is to provide a general reference point to the site on a national scale. The coordinates of each site point can be the location of a site monument, the centroid of the site boundary, or a general location of the site. This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Nov 6, 2025

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Aug 1, 2025

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Cases filed since 2010 limited to the following: Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS); and applicable ENRD's Environmental Defense Section (EDS) CERCLA Cases with "Consent" in History Note. CMS may not reflect the latest developments in a case, nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Jun 26, 2024

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Sep 26, 2025

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: May 23, 2024

Power Plants: POWER PLANTS

This list of power plants is provided by the U.S. Energy Information Administration (EIA). The listing includes operable electric generating plants in the United States by energy source, originating from the EIA-860, Annual Electric Generator Report; EIA-860M, Monthly Update to the Annual Electric Generator Report; and EIA-923, Power Plant Operations Report. It includes all operable plants by energy source with a combined nameplate capacity of 1 megawatt or more that are operating, are on standby, or out of service for short- or long-term.

Government Publication Date: Jun 5, 2025

Historical Business Activity Risk: HIST RISK

Proprietary list of sites identified as potentially having engaged in business activity that poses a higher-than-normal risk of contamination. Records originate from historical city directories, and are included in this list based on broad business categories Potentially Hazardous Chemical Users and Fuel and Automotive, including but not limited to Dry Cleaners and Fuel Stations, Garages, etc. Inclusion in this listing does not indicate that there is or ever has been contamination; rather, sites are included in this list due to their potential for having engaged in a business activity presenting an elevated risk of contamination. The list was compiled from various city directories including Polks, Millers, Mullin Kille, Interstate Directory, and State Directory Co; spanning roughly 1920s through 1960 depending on information available by city.

Government Publication Date: Jan 1, 1960

State

Priority Ranking List: PRIORITYCLEAN

The Florida Legislature has established a state-funded program to cleanup properties that are contaminated as a result of the operations of a drycleaning facility or wholesale supply facility (Chapter 376, Florida Statutes). The program is administered by the Florida Department of Environmental Protection (FDEP). The statute was sponsored by the drycleaning industry to address environmental, economic, and liability issues resulting from drycleaning solvent contamination. The program provides limited liability protection to the owner, operator and real property owner of drycleaning or wholesale supply facilities for cleanup of drycleaning solvent contamination if the parties meet the eligibility conditions stated in the law.

Government Publication Date: Oct 26, 2025

Dry Cleaning Facilities: DRYCLEANERS

A listing of dry cleaning facilities registered with the Florida Department of Environmental Protection (FDEP). The information contains facility identification number, site location information, related party (owner) information, and facility type and status. Data is taken from the Storage Tank & Contamination Monitoring database, the registration repository of dry cleaner facility data.

Government Publication Date: Jun 13, 2025

Delisted Dry Cleaning Facilities: DELISTED DRYCLEANERS

List of sites removed from the drycleaners database made available by the Florida Department of Environmental Conservation (DEC).

Government Publication Date: Jun 13, 2025

Historical Dry Cleaners: HISTORICAL DRYC

The Florida Department of Environmental Protection (FDEP) provided this historical database of regulated and non-regulated dry cleaning facilities. These facilities were at one time tracked and registered by the FDEP OCULUS Electronic Document Management System as "drums" in the underground storage tank database.
Government Publication Date: Aug 2, 2013

Oil and Hazardous Materials Incidents: SPILLS
Statewide listing of oil and hazardous materials spills and incidents recorded by the Florida Department of Environmental Protection (FDEP).
Government Publication Date: Oct 1, 2025

Contaminated Sites: DWM CONTAM
Florida Department of Environmental Protection (FDEP) Division of Waste Management (DWM) listing of active or known sites that include sites requiring cleanup but are not actively being worked on due to the agency's lack of funding (primarily petroleum and drycleaning).
Government Publication Date: Mar 3, 2025

Delisted Contaminated Sites: DEL CONTAM SITE
List of sites which were once included on the Florida Department of Environmental Protection (FDEP) Division of Waste Management (DWM)'s Contaminated Sites list. As sites on the Contaminated Sites (CS) list are cleaned up or closed under risk based corrective action, they are removed from the CS list.
Government Publication Date: Sep 30, 2015

Aqueous Film Forming Foam (AFFF): PFAS AFFF
A list of fire fighter training facilities that use or possibly used Aqueous Film Forming Foam (AFFF). This list is made available by the Florida Department of Environmental Protection (DEP).
Government Publication Date: Aug 29, 2024

PFAS Investigation at Federal Facilities: PFAS
List of sites - including Federal Facilities - in Florida at which either a) there has been confirmed or suspected usage of Aqueous Film Forming Foam (AFFF), or b) the Division of Waste Management has identified as a potential source or environmental impact related to per- and polyfluoroalkyl substances (PFAS). The Florida Department of Environmental Protection (DEP) is committed to the protection of the groundwater resources of the state and the public health and safety of residents. The DEP will continue its efforts to investigate and understand PFAS in the environment and the ecological and human health risks associated with PFAS contamination. Listings made available by the Florida Department of Environmental Protection (DEP).
Government Publication Date: Nov 30, 2025

Ground Water Contamination Areas: GW CONTAM
List of areas of known groundwater contamination made available by the Florida Department of Environmental Protection (DEP). 38 counties have been delineated primarily for the agricultural pesticide ethylene dibromide (EDB), and to a much lesser extent, volatile organic and petroleum contaminants. Permitted water wells in these areas must meet specific well construction criteria and water testing prior to well use. This dataset only indicates the presence or absence of specific groundwater contaminants and does not represent all known sources of groundwater contamination in the state of Florida.
Government Publication Date: Jul 12, 2023

Underground Injection Control Wells: UIC
Class I Underground Injection Control (UIC) wells that are currently or were previously active, as well as proposed sites, regulated by the Florida Department of Environmental Protection (FDEP). Class I UIC wells are used to inject nonhazardous waste, hazardous waste (new hazardous waste wells were banned in 1983), or municipal waste below the lowermost underground source of drinking water.
Government Publication Date: Sep 20, 2025

Well Surveillance Program Facilities: WELL SURVEILLANCE
List of facilities made available by the Florida Health Well Surveillance group. The Well Surveillance group manages several programs to identify and monitor areas in Florida where contaminated drinking water is suspected and may pose a threat to public health. The section coordinates with the County Health Departments (CHDs) to locate potable wells and conduct water sampling for contaminants of concern. The Well Surveillance Section is composed of the State Underground Petroleum Environmental Response Act (SUPER Act), Drinking Water Toxics Program (Toxics), Drycleaner Solvent Cleanup Program (DSCP). Includes locations of known cattle dipping vats.
Government Publication Date: Nov 17, 2025

Cattle Dip Vats: CDV SOUTHEAST
A list of Cattle Dip Vats in Southeast Florida made available by the Florida Department of Environmental Protection.
Government Publication Date: Jan 19, 2017

Tier 2 Report: TIER 2

A list of Tier 2 facilities in the state of Florida. The list tracks the inventory of chemicals within a particular facility. This list is provided by the Florida Division of Emergency Management.

Government Publication Date: Apr 2, 2024

Delisted County Records: DELISTED COUNTY

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Nov 9, 2025

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: CITY DIRECTORY RESEARCH
1350 Island Club Manor
Vero Beach,FL 32963

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
8300-8850 of Hwy A1A
ALL of Island Club Manor
ALL of Island Club Sq
8500-8650 of Jungle Trl
8450-8700 of Seacrest Dr
ALL of W Island Club Sq
Search Notes:
Highway A1A is also known as 8650 Jimmy Buffett Mem Hwy in Vero Beach.
