Re: Experienced engineering support for Renewable Natural Gas production facility

Dear Himanshu,

This letter is to confirm that our team at the Indian River Eco District has been working with the engineering support of Biogas Engineering during the last 1 year and 9 months, as we have continued to progress forward with our Renewable Natural Gas (RNG) production facility.

As you know, RNG is a relatively new industry within the United States, and there are currently less than 200 operational RNG facilities across the entire country. Within the state of Florida, there are currently no RNG facilities yet operational, and we expect for our facility to become the first (if not one of the very first) fully built and operational RNG facilities in this state.

We always look to hire or subcontract local talent on all of our work efforts. However, as we are effectively pioneering this industry within the state of Florida, we quickly realized last year that there was an absence of local engineering companies with real experience in the engineering design, procurement and construction of RNG facilities. Hence, we performed an exhaustive search across the United States, and we selected Biogas Engineering as our engineering partner based on their in-depth knowledge and experience with a) landfill engineering design and optimization, and b) all aspects of designing and building other RNG facilities in the US. Furthermore, as we began speaking with infrastructure investment partners that are becoming active in this new sector, we were delighted to learn that many of the leading infrastructure capital groups lean on the skills of the Biogas Engineering team to perform the engineering due diligence on projects being considered for capital investment.

Thus far, we have been incredibly pleased with the professionalism, knowledge and support of the Biogas Engineering team, and quite frankly they have saved us a lot of time and money by helping us to make the optimal decisions at every step as we progress with this multi-phased project effort. We would confidently recommend them to any private sector developer or public sector landfill that is becoming involved in this type of project.

Sincerely,

A handwritten signature in black ink, appearing to read "Alain Castro", is written over a light blue circular stamp.
